Dear Sir,

Re: Contract No. WD/07/2022

Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring and Audit Report – August 2024

We would like to certify the captioned report pursuant to Condition 3.4 of the Environmental Permit No. EP-548/2018/A, EP-549/2018, EP-550/2018/A, EP-551/2018/A and EP-553/2018/A for the Yuen Long South First Phase Development.

Should you have any queries or require further information, please feel free to contact us or the undersigned at Tel: 2959-6059 or Fax: 2959-6079.

Yours sincerely, For and on Behalf of Ford Business International Limited

Tam Tak Wing

Environmental Team Leader

Encl.

Attn.: Mr. Alex Chan

Dear Alex,

Agreement No. WD/06/2022 Yuen Long South First Phase Development – Independent Environmental Checker Verification for Monthly EM&A Report (August 2024)

With reference to the Monthly Environmental Monitoring and Audit (EM&A) Report – August 2024 (Issue 2) as submitted by the Environmental Team in September 2024, we have no adverse comment on this submission which are related to designated projects. We are pleased to inform that we hereby verify the captioned submission in accordance with Condition 3.4 of the Environmental Permit No. EP-548/2018/A, EP-549/2018, EP-550/2018/A, EP-551/2018/A and EP-553/2018/A for the Yuen Long South First Phase Development.

Should you have any queries, please do not hesitate to contact the undersigned at (852) 3610 8701 or our Mr. Michael Fong at (852) 3610 8706 or our Mr. Vince Lo at (852) 3610 8787 or our Mr. Jacky Tsang at (852) 3610 8735.

Yours faithfully,

For and on behalf of

**Telemax Environmental and Energy Management Limited** 

Ir Nelson Tam

#### **EXECUTIVE SUMMARY**

#### INTRODUCTION

ES.01 This is the Monthly Environmental Monitoring and Audit (EM&A) Report, presenting the monitoring results and inspection findings for the Project for the reporting period from 1<sup>st</sup> to 31<sup>st</sup> August 2024 (hereinafter called 'the Reporting Period).

#### **ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES**

ES.02 Environmental monitoring activities under the EM&A programme of the Project in the Reporting Period are summarized in the following table.

Environmental Aspect	Monitoring Parameter	Monitoring Station/ Location	Number of Monitoring
Air Quality	1-hour Total Suspended Particulates (TSP)	DM-1, DM-2	36 sessions
Noise	Leq30mins	CM1a, CM2a, CM3, CM4 and CM8a	20 sessions
Water Quality	Dissolved oxygen, dissolved oxygen saturation (DO%), temperature, turbidity, salinity, pH and suspended solids (SS)	M1a, M2a, M3, M4, U3, U4a, M5a, M6a, D2a, M7a, U1b, U2a & EIS-1a	13 days
	Site audit for implementation	Contract 1	4 events
Site Inspection	of mitigation measures	Contract 2	4 events
		Contract 3	5 events

# ACTION AND LIMIT (A/L) LEVELS EXCEEDANCE

ES.03 In the Reporting Period, no exceedances of Action / Limit Levels on air quality and noise were recorded in the reporting month. However, there were 12 Limit Level exceedance on water quality were recorded. The summary of exceedances recorded in the Reporting Period is shown table below.

Environmental	Monitoring	Action	Limit	nit Event & Action			
Aspect	Parameters	Level	Level	NOE Issued	<b>Investigation Result</b>	<b>Corrective Actions</b>	
Air Quality	1-hour TSP	0	0	0			
Construction Noise	L <sub>eq(30min)</sub> Daytime	0	0	0			
	DO	0	0	0			
Water Quality	Turbidity	0	7	7	Not project related	Not required	
	SS	0	5	5			

- ES.04 Exceedances of A/L levels were recorded on 14<sup>th</sup>, 23<sup>rd</sup> and 28<sup>th</sup> August 2024. Notification of Exceedance (NOE) with preliminary investigation and on-site observation were issued to all concerned parties, i.e. ER, Contractor and IEC. Investigation revealed that no major construction activities were conducted near the monitoring stations of M2a, M3 and EIS-1a, but pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment. It is considered that the exceedances were related to other source along the Nullah.
- ES.05 Bi-weekly inspection of landscape and visual impact and mitigation measures were conducted by ET during the weekly site inspection. It was observed that six individual trees under Contract 2 transplanted to the nursery site were in fair condition. For Contract 3, the nursery site for

# CEDD Service Contract No. WD/07/2022 Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring & Audit Report – August 2024

transplanted tree were properly maintained by the Contractor, and the transplanted trees were in fair health condition.

ES.06 The Contractors are advised to implement the waste management plan and minimise the wastes generated through recycling or reusing. All mitigation measures stipulated in the Updated EM&A Manual and waste management plans shall be fully implemented.

#### SITE INSPECTION

ES.07 In the Reporting Period, weekly joint site inspection to evaluate the site environmental performance had been carried out by the representatives of the Consultants, ET and the respective Contractor of Contract 1, Contract 2 and Contract 3. No non-compliance was noted during the site inspection. In addition, IEC carried out the joint site inspections for Contract 2 and Contractor 3 on 30<sup>th</sup> August 2024 and 29<sup>th</sup> August 2024 respectively.

#### **ENVIRONMENTAL COMPLAINT**

ES.08 In the Report Month, no environmental complaint was received.

## NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.09 In the Reporting Month, no environmental summons and prosecutions were recorded.

#### REPORTING CHANGE

ES.10 There is no reporting change in the Reporting Period.

#### **FUTURE KEY ISSUES**

- ES.11 During wet season, water quality mitigation measures shall be fully implemented in accordance with the Implementation Schedule for Environmental Mitigation Measures of the updated EM&A Manual.
- ES.12 In addition, the Contractor should fully implement the recommended air quality mitigation measures to minimize the impact of construction dust as far as practicable, in particular the contract works located near the village area.
- ES.13 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants and/ or using movable temporary noise barriers should be implemented as stipulated under EM&A Manual to ensure construction noise impacts at the NSRs comply with the noise criteria.

## 1 INTRODUCTION

## 1.1 BACKGROUND

- 1.1.1 Yuen long South (YLS) is located to the immediate south of Yuen Long New Town and is positioned as Yuen Long New Town Extension. It will serve as one of the major sources of land supply to meet the territory's medium to long-term housing needs through comprehensive planning and improvement of infrastructure including the linkage to Yuen Long New Town and the Hung Shui Kui/Ha Tsuen New Development Area (HSK/HT NDA).
- 1.1.2 Planning Department (PlanD) and Civil Engineering and Development Department (CEDD) of the HKSAR jointly commissioned the Planning and Engineering Study (YLS P&E Study) under Agreement No. CE 35/2012 (CE) in November 2012 to carry out planning, engineering and environmental studies with view to formulating a development proposal for YLS Development. It confirmed the feasibility of implementing the proposal for YLS Development to meet the medium and long-term housing, social, economic and environmental needs, and formulated the implementation strategies and programme for the YLS Development with first population intake by the year of 2028.
- 1.1.3 YLS P&E Study Project is a Designated Project (DP) under Schedule 3 of the Environmental Impact Assessment Ordinance (EIAO). In November 2017, Environmental Impact Assessment (EIA) report for YLS Development was approved by Director of Environmental Protection pursuant to EIAO. The approved EIA report (AEIAR-215/2017), the approval letter with conditions and recommendations and the relevant Environmental Permit (EPs) issued subsequently. To implement the Project, there are various infrastructure items among some of which are classified as DPs under Schedule 2 of the EIA Ordinance.
- 1.1.4 Under the YLS P&E Study, YLS Development was tentatively to be implemented in four stages including Stage 1, Stage 2, Stage 3 and Stage 4. Subsequently, the Stage 2 is further split into (i) stage 2A (previously known as stage 2, phase 1) and (i i) stage 2B (previously known as stage 2 remaining works). The design and construction consultancies of YLS Development stage 1 works (under Agreement No. CE 32/2017 (CE)) and stage 2A works (under Agreement No. CE 58/2019 (CE)) commenced in February 2018 and March 2020 respectively. First population intake of YLS Development is expected in 2028.
- 1.1.5 Currently, YLS Development will be implemented by three phases, namely First Phase, Second Phase and Third Phase Development. The phasing plan of YLS Development is shown in *Appendix A*. The site formation and engineering infrastructure works to support the First Phase Development, covering stage 1 works and stage 2A works (hereafter referred to as "the Project") is funded under the following PWP items:
  - 1) PWP Item No. 7817CL Yuen Long South Development stage 1 works; and
  - 2) PWP Items No. 7872CL Yuen Long South Development stage 2 works site formation and engineering infrastructure and stages 2B and 3 works detailed design and site investigation.

# 1.2 PROJECT SCOPE

- 1.2.1 The scopes of the Project comprise the following principal work elements: Works under PWP Item No. 7817CL:
  - (a) Site formation works and decontamination works, if any, for the Sites VR1.1, VR2.1 and R2.2
  - (b) Construction of Road L 1 A and L 18 including widening existing roads and construction of new roads, to provide access to the Site R2.2 and connect to Tai Tong Road and Tai Shu Ha Road West
  - (c) Construction of Road L2 to provide access to the Site VR2.1 and connect to Lam Tai West Road
  - (d) Construction of Road L3 to provide access to the Site VR1.1 and connect to Long Hon Road
  - (e) Construction of slopes and retaining walls associated with Road L 1 A and L 18
  - (f) Construction of Common Utility Tunnel along part of Lam Tai East Road and Road L 1A

- (g) Improvement of Kung Um Road/ Kiu Hing Road between Sham Chung Road and Shap Pat Heung Road and associated road junctions by decking of Yuen Long Nullah and modification of drainage structure at junction of Yuen Long Nullah and Yuen Long bypass Floodway
- (h) Provision of other infrastructure to serve the sites as mentioned in (a) above to be formed under the Project
- (i) Provision of associated road junction improvement, street lighting, traffic aids, utility diversion, geotechnical, drainage, sewerage, water supply landscaping and environmental mitigation works

# Works under PWP Item No. 7872CL:-

- (a) Reconstruction of Tong Yan San Tsuen (TYST) Interchange and Associated Works
  - Construction of new primary distributor roads with partly depressed roads and underpass
  - Construction/ modification of slip roads
  - Construction of junction connecting TYST Interchange, Shan Ha Road and Long Hon Road
  - Construction of noise mitigation measures
  - Construction of associated footpaths, cycle tracks and subways
- (b) Construction of New Roads
  - Construction of Road 01 (Part) with associated footpaths, pedestrian crossing and refuge island
  - Construction of Road 02 (Part) with associated footpaths, pedestrian crossing and refuge island
  - Construction of eastbound left-turn lane at the approach road of Shap Pat Heung Interchange heading to Pok Oi Interchange
- (c) Site Formation for Multi-storey Building (MSB) Sites
  - Site Formation works and decontamination works
  - Realignmentl widening/ extension of a section of Tong Tai Road
- (d) Construction/ modification of section of Kung Um Road at south of Yuen Long Highway
- (e) Construction/ modification of section of Wong Nai Tun Tsuen Road and Kiu Hing Road
- (f) Construction/ modification of section of Lam Tai East Road and Lam Yu Road
- (g) Provision of associated road junction improvement, street lighting, traffic aids, utility diversion, geotechnical, drainage, sewerage, water supply, landscaping and environmental mitigation works

# Works from other projects to be entrusted

- (a) Construction of ON1600 watermains from HSKIHT NOA project
- 1.2.2 The Project will be delivered under three CEDD works contracts as below:-
  - (a) CEDD Contract No. YL/2021/03 Site Formation and Infrastructure Works for Yuen Long South First Phase Development Contract 1
  - (b) CEDD Contract No. YL/2021/04 Site Formation and Infrastructure Works for Yuen Long South First Phase Development Contract 2 (the designated works of Contract 2 are governed by EP-549/2018 & EP-553/2018/A)
  - (c) CEDD Contract No. YL/2022/01 Site Formation and Infrastructure Works for Yuen Long South First Phase Development Contract 3 (the designated works of Contract 3 are governed by EP-548/2018/A, EP-549/2018, EP-550/2018/A, EP-551/2018/A)
- 1.2.3 The general layout of YLS First Phase Development is are shown in *Appendix A*.

### 1.3 DESIGNATED WORKS

1.3.1 To implement the Project, there are various infrastructure items among some of which are classified as DPs under *Schedule 2 of the EIA Ordinance*. In general, the designated works of YLS First Phase Development are governed by five Environmental Permits. The relevant EPs under the YLS First Phase Development and the respective Work Contracts are summarized in *Table 1-1* and the Schedule 2 Designated Project under YLS First Phase Development are shown in *Appendix B*.

Table 1-1 Summary of Schedule 2 Designated Project under YLS First Phase Development

	Table 1-1 Summary of Schedule 2 Designated Project under 1125 First Phase Development					
DP Reference No.	EP	Designated Project	Contract Works	C2	С3	
DP2	EP-548/2018/A	Construction of New Primary Dist ributor Roads (Tong Yan San Tsu en Interchange) for Housing Sites in YLS.	Reconstruction of Tong Yan San Tsuen Interchange		√	
DP3	EP-549/2018	Construction of Two New District Distributor Roads (Road D1 to Road D2) for Housing Sites in YLS	C2: Construction of proposed Road D1, Road D2, Road L1A, Road L1B and slip road at the existing Shap Pat Heung Interchange C3: Improvement to sections of existing Shan Ha Road, Long Hon Road and Tong Tai Road, and other road works	V	√	
DP5	EP-550/2018/A	Construction of Slip Roads at Ton g Yan San Tsuen Interchange for Housing Sites in YLS	Reconstruction of Tong Yan San Tsuen Interchange		1	
DP6	EP-551/2018/A	Construction of Partly Depressed Road / Underpass Located at Tin Shui Wai West Interchange and F ull Enclosures at Tong Yan San T suen Interchange	Reconstruction of Tong Yan San Tsuen Interchange		√	
DP10	EP-553/2018/A	Yuen Long Nullah Revitalisation / Decking along Kung Um Road and Kiu Hing Road for Housing Sites in YLS	Nullah deckings at various locations	7		

NOTE: DP reference no is according to approved EIA report (AEIAR-215/2017) and EM&A Manual (AEIAR-215/2017)

## 1.4 IMPLEMENTATION OF EM&A PROGRAMME

- 1.4.1 Ford Business International Limited (hereinafter called "Ford") was awarded the CEDD Agreement Contract No. WD/07/2022 Yuen Long South First Phase Development Environmental Team (hereinafter called "the Service Contract") on 26 October 2022. The Contractor period is 78 months which covered the construction period and the first-year operation period for the Works Contracts 1, 2 and 3 under the YLS First Phase Development (hereinafter named as "the Project).
- 1.4.2 In accordance with relevant EPs condition 2.4, an updated EM&A Manual for YLS First Phase Development (Rev.10) (hereinafter named as "updated EM&A Manual") has been submitted to EPD to include the latest EM&A requirement in accordance with the information and recommendation described in the EIA Report and by taking into account any specific site conditions that may be changed before the construction of the Project. It outlines the monitoring and audit programme for the Project for the construction phase and provided systematic procedures for monitoring, auditing and minimizing environmental impacts ensure compliance with the EIA recommendations.
- 1.4.3 In accordance with the updated EM&A Manual, baseline monitoring for air quality, noise and water quality monitoring was conducted by the ET of YLS First Phase Development at the agreed monitoring locations from 8 March 2023 to 4 June 2023. The Baseline Monitoring Report (Report ref.: TCS01267/22/600/R0044v4) which was verified by the Independent Environmental Checker (hereinafter referred as "the IEC"), was submitted to EPD on 7 July 2023.
- 1.4.4 According to the Project's programme, the various infrastructure items, which are classified as DPs under *Schedule 2 of the EIA Ordinance*, are tentatively scheduled to commence in December 2023. Nevertheless, in light of the commencement of construction works at non-EP area of the Project, the EM&A Programme in relevant sections was initiated on 13<sup>th</sup> July 2023 to fulfill the contractual and EM&A Manual requirements.

# CEDD Service Contract No. WD/07/2022 Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring & Audit Report – August 2024

1.4.5 This is the Monthly EM&A Report, presenting the monitoring results and inspection findings for the Project, for the reporting period from 1<sup>st</sup> to 31<sup>st</sup> August 2024 (hereinafter called 'the Reporting Period).

## 1.5 REPORT STRUCTURE

- 1.5.1 The Monthly EM&A Report is structured into the following sections:-
  - **Section 1** Introduction
  - Section 2 Project Organization and Construction Progress
  - Section 3 Summary of Impact Monitoring Requirements under the Contract
  - **Section 4** Air Quality Monitoring
  - **Section 5** Construction Noise Monitoring
  - Section 6 Water Quality Monitoring
  - Section 7 Ecology Monitoring
  - Section 8 Waste Management
  - **Section 9** Site Inspections
  - Section 10 Environmental Complaints and Non-Compliances
  - Section 11 Implementation Status of Mitigation Measures
  - **Section 12** Conclusions and Recommendations

## 2 CONSTRUCTION PROGRESS AND PROJECT ORGANISATION

## 2.1 CONSTRUCTION CONTRACT PACKAGING

- 2.1.1 To facilitate the project management and implementation, the site formation and engineering infrastructure works to support First Phase Development will be delivered under CEDD three works contracts as follows: -
  - Contract 1 (CEDD Contract no.: YL/2021/03)
  - Contract 2 (CEDD Contract no.: YL/2021/04)
  - Contract 3 (CEDD Contract no.: YL/2022/01)

# <u>CEDD Contract No. YL/2021/03 - Site Formation and Infrastructure Works for Yuen Long South</u> First Phase Development - Contract 1

- 2.1.2 The contract was scheduled to commence in September 2022 and will take about 32 months to complete. The scope of works covered in this contract is listing in the following:
  - Site clearance and formation (including land decontamination works) for about five hectares of land, together with the provision of associated engineering infrastructure;
  - Construction of a single two-lane carriageway of about 130 metres long connecting to Lam Tai West Road;
  - Construction of a single two-lane carriageway of about 130 metres long connecting to Long Hon Road;
  - Construction of associated works including footpaths, slopes, retaining wall, landscaping works, water supply system, sewerage system and drainage system; and
  - Implementation of environmental mitigation measures for the works mentioned above.

# <u>CEDD Contract No. YL/2021/04 - Site Formation and Infrastructure Works for Yuen Long South First Phase Development - Contract 2</u>

- 2.1.3 The contract was scheduled to commence in the 4<sup>th</sup> Quarter of 2022 and will take about 64 months to complete. The scope of works covered in this contract is listing in the following:
  - Site clearance and formation (including land decontamination works);
  - Nullah deckings at various locations;
  - Construction of proposed Road D1, Road D2, Road L1A, Road L1B and slip road at the existing Shap Pat Heung Interchange;
  - Improvement to sections of existing Kung Um Road, Kiu Hing Road, Wong Nai Tun Tsuen Road, Lam Tai East Road, Tai Kei Leng Road, Tai Tong Road, Lam Hi Road, Lam Yu Road, Shap Pat Heung Road and Sham Chung Road;
  - Construction of associated works including water mains, drainage works and sewerage systems, cycle tracks, footpaths, common utility tunnel, box culverts, junction improvement works, slope works, retaining walls, landscaping works, electrical and mechanical works and other ancillary works; and
  - Implementation of environmental mitigation measures (including noise semi-enclosures, noise barriers and low-noise road surfacing) and environmental monitoring works for the works mentioned above.

# <u>CEDD Contract No. YL/2022/01 - Site Formation and Infrastructure Works for Yuen Long South First Phase Development - Contract 3</u>

- 2.1.4 The contract was scheduled to commence in 4<sup>th</sup> Quarter of 2022 and will take about 64 months to complete. The scope of works covered in this contract is listing in the following:
  - Site clearance and formation (including land decontamination works);
  - Reconstruction of Tong Yan San Tsuen Interchange;
  - Improvement to sections of existing Shan Ha Road, Long Hon Road and Tong Tai Road, and other road works;

- Construction of associated works including water mains, drainage and sewerage works, subways, cycle tracks, footpaths, box culverts, nullah deckings, junction improvement works, slope works, retaining walls, landscaping works, electrical and mechanical works and other ancillary works; and
- Implementation of environmental mitigation measures (including noise enclosures, noise barriers and low-noise road surfacing) and environmental monitoring works for the works mentioned above.

#### 2.2 PROJECT ORGANISATION

2.2.1 The project organization and the key personal contact is shown in *Appendix C*. The responsibilities of respective parties are:

# Civil Engineering and Development Department

2.2.2 CEDD is the Project Proponent and the Permit Holder of the EP of the Project and assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by CEDD to audit the results of the EM&A works carried out by the ET.

# Environmental Protection Department (EPD)

2.2.3 EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

## Project Manager

- 2.2.4 AECOM is the Engineer's Representative (ER) responsible for overseeing the construction works and for ensuring that the works undertaken by the Contractor are in accordance with the specification and contractual requirements. The duties and responsibilities of the Consultants with respect to the EM&A may include:
  - Supervise the Contractor's activities and ensure that the requirements in the EM&A Manual are fully complied with;
  - Inform the Contractor when action is required to reduce impacts in accordance with the Even and Action Plans;
  - Assist the Project Proponent in employing an IEC to audit the results of the EM&A works carried out by the ET;
  - Participate in joint site inspection undertaken by the ET and/or IEC;
  - Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance; and
  - Adhere to the procedures for carrying out complaint investigations.

## The Contractor

- 2.2.5 Tung Lee Engineering Company is Contractor of the Contract 1; CREC Joint Venture is Contractor of the Contract 2; and China Road and Bridge Corporation Company is Contractor of the Contract 3. The duties and responsibilities of the Contractor is:
  - Report to the Consultants;
  - Implement the EIA recommendations and requirements;
  - Provide assistance to ET in carrying out monitoring and auditing;
  - Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event and Action Plans;
  - Implement measures to reduce impact where Action and Limit levels are exceeded; and
  - Adhere to the agreed procedures for carrying out compliant investigation.

## Environmental Team (ET)

2.2.6 Ford Business International Limited was appointed by CEDD as the ET to undertake the EM&A programme with the associated duties in May 2019. The ET is managed by the ET Leader who has at least 7 years' experience in EM&A and has relevant professional qualifications. Suitably qualified staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in time under the Contract, to enable fulfillment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The duties of

# CEDD Service Contract No. WD/07/2022 Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring & Audit Report – August 2024

#### ET shall include:

- Set up all the required environmental monitoring stations;
- Monitor various environmental parameters as required in the EM&A Manual;
- Analyse the environmental monitoring and audit data and review the success of EM&A programme to confirm the adequacy of mitigation measures implemented and the validity of the EIA predictions and to identify any adverse environmental impacts arising;
- Carry out site inspection to investigate and audit the Contractors' site practice, equipment and work methodologies with respect to pollution control and environmental mitigation, and take proactive actions to preempt problems;
- Liaison with IEC on all environmental performance matters, and timely submission of all relevant EM&A proforma for IEC's approval;
- Prepare reports on the environmental monitoring data and site environmental conditions;
- Report on the environmental monitoring and audit results to the IEC, Contractor, the Consultants, Project Proponent and EPD;
- Recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans;
- Give advice to the Contractor on environmental improvement, awareness, enhancement matters, etc. on site;
- Undertake regular on-site audits / inspections and report to the Contractor, the Consultants and IEC of any potential non-compliance;
- Follow up and close out non-compliance actions; and
- Adhere to the procedures for carrying out environmental complaint investigation.

# Independent Environmental Checker (IEC)

- 2.2.7 **Telemax Environmental and Energy Management Limited** is employed by the Permit Holder (i.e. CEDD). The IEC has over 7 years' experience in EM&A and environmental management. The duty of IEC should be:
  - Review in an independent, objective and professional manner the EM&A works performed by the ET (at not less than monthly intervals);
  - Audit the monitoring activities and results (at not less than monthly intervals);
  - Validate and confirm the accuracy of monitoring results, monitoring equipment, monitoring locations, monitoring procedures and location of sensitive receivers;
  - Report the audit results to the Consultants, the Project Proponent and EPD in parallel;
  - Review the EM&A reports submitted by the ET;
  - Check and review the proposed mitigation measures submitted by the Contractor in accordance with the Event and Action Plans;
  - Check and review the effectiveness of the mitigation measures that have been recommended in the EIA and the EM&A Manual, and ensure they are properly implemented in a timely manner, when necessary;
  - Report the findings of site inspections and other environmental performance reviews to Project Manager, Project Proponent and EPD.
  - Coordinate the monitoring and auditing works for all the on-going contracts in the area in order to identify possible sources / causes of exceedances and recommend suitable remedial actions where appropriate;
  - Coordinate the assessment and response to complaints / enquires from locals, green groups, district councils or the public at large;
  - On as-needed basis, verify and certify the environmental acceptability of the Contractor's construction methodology (both temporary and permanent works), relevant design plans and submissions under the EP; and
  - Verify investigation results of environmental complaint cases and the effectiveness of corrective measures.

# 2.3 CONSTRUCTION PROGRESS

2.3.1 According to the Project's programme, the various infrastructure items under Contract 2 and Contract 3, which are classified as DPs under Schedule 2 of the EIA Ordinance, are scheduled to commence in December 2023. The construction activities carried out in the Reporting Period are summarized **Table 2-1** and the 3-month rolling construction programme for Contract 1, Contract 2 and Contract 3

are shown in **Appendix D**.

Table 2-1 Summary of Construction Activities in the Reporting Period

Contract No.	Construction Activities undertaken in the Reporting Period			
	Non-designated work	Designated work		
YL/2021/03 (Contract 1)	<ul> <li>Demolition works</li> <li>Ground Investigation</li> <li>Site Hoarding</li> <li>Site Clearance</li> <li>Site Formation</li> <li>Construction of drainage system</li> <li>Piling work</li> </ul>	N/A

# 3 AIR QUALITY MONITORING

# 3.1 MONITORING REQUIREMENTS

- 3.1.1 In accordance with the updated EM&A Manual, the ET shall carry out impact monitoring during the construction period. For regular impact monitoring of 1-hour TSP, the sampling frequency of at least 3 times in every 6 days should be undertaken. Before commencing impact monitoring, the ET shall inform the IEC of the impact monitoring programme such that the IEC can conduct on-site audit to ensure accuracy of the monitoring results.
- 3.1.2 In case of non-compliance with the air quality criteria, more frequent monitoring, as specified in the Action Plan in the following section, shall be conducted within the specified timeframe after the result is obtained. This additional monitoring shall be continued until the excessive dust emission or the deterioration in air quality is rectified, and agreed with the ER and the IEC.

## 3.2 MONITORING LOCATIONS

3.2.1 The phasing of the Project has been addressed in the approved EIA report, according to the updated EM&A Manual, DM-1 and DM2 are the monitoring stations for First Phase of YLS Development. The locations of construction dust monitoring stations under YLS First Phase Development are summarized in *Table 3-1* and illustrated in *Appendix E*.

**Table 3-1** Construction Dust Monitoring Locations

ID	Monitoring Locations	<b>Description of Location</b>				
Existing Air	Existing Air Sensitive Receivers					
DM-1	Shan Ha Tsuen House No. 613F	Shan Ha Tsuen House No. 613F				
DM-2	Village House along Kung Um Road	No. 118G Kung Um Road - Golden Villa				

## 3.3 MONITORING EQUIPMENT

- 3.3.1 Portable direct reading dust meters brand named "Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter" were used to 1-hour TSP measurement. The portable direct reading dust meters provided a real time 1-hour TSP measurement based on 90° light scattering.
- 3.3.2 The portable direct reading dust meters were used within the valid period following manufacturer's Operation and Service Manual. It was calibrated annually and determined periodically by the calibrated High-Volume Sampler to check the validity and accuracy of the results measured by direct reading method. The proposed use of portable direct reading dust meters was submitted to the IEC and obtained agreement and stated in Section 4.3 of the Updated EM&A Manual.
- 3.3.3 The equipment used for impact air quality monitoring is listed in *Table 3-2*. The copies of calibration certificates for air quality monitoring equipment are shown in *Appendix F1*.

Table 3-2 Air Quality Monitoring Equipment

Equipment	Model	Serial No.					
1-hour TSP							
	Sibata LD-3 Laser Dust monitor Particle Mass Profiler & Counter	366407					
D (11 D (1)		366418					
Portable Dust Meter		366410					
		2X6145					

## Wind Data Monitoring Equipment

3.3.4 In consideration of the safety concerns of setting up wind sensor at 10m above ground, the ETL had proposed alternative method to obtain representative wind data in the updated EM&A Manual. Meteorological information at Wetland Park Station collected from the Hong Kong Observatory were used for the Project. It is located nearby the Project site and the meteorological data is considered representative of the Project area. This station can also provide other meteorological information include air temperature, relative humidity, wind direction, wind speed and mean sea level pressure. In additional, adoption of meteorological information from Hong Kong Observatory

is a common alternative method for a lot of EM&A projects in Hong Kong. The weather data including wind speed and wing direction in the Reporting Month are summarized in *Appendix G*.

#### 3.4 MONITORING PROCEDURES

- 3.4.1 The portable direct reading dust meters brand named "Sibata LD-3 Laser Dust monitor Particle Mass Profiler & Counter" was used for impact monitoring. It is a portable, battery-operated laser photometer and provides a real time 1-hour TSP measurement based on 90° light scattering.
- 3.4.2 The 1-hour TSP meter used is within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument was checked before and after each monitoring event. Operation of the 1-hour TSP meter was follow manufacturer's Operation and Service Manual.

## 3.5 ACTION/LIMIT LEVELS FOR AIR QUALITY

3.5.1 The baseline results form the basis for determining the environmental acceptance criteria for the impact monitoring. Following the guidelines for establishing the Action and Limit Levels for air quality monitoring, the Action and Limit Levels are presented in *Table 3-3*. Should project-related non-compliance of the environmental quality criteria occur, remedial actions will be triggered according to the Event and Action Plan which is presented in *Appendix H*.

Table 3-3 Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action Level (μg /m³)	Limit Level (µg /m³)	
DM-1	268	500	
DM-2	268	500	

# 3.6 AIR QUALITY MONITORING RESULTS

- 3.6.1 In light of the commencement of non-designated works and preparation of designated work of the Project, the EM&A Programme in relevant sections was initiated on 13<sup>th</sup> July 2023 to fulfill the contractual and EM&A Manual requirements. The monitoring schedule is presented in *Appendix I* and the monitoring results are summarized in the following sub-sections.
- 3.6.2 In the Reporting Period, 1-hour TSP monitoring were carried out at DM-1 and DM-2 and the monitoring results are summarised in *Tables 3-4*. The detailed 1-hour TSP monitoring results are provided in *Appendix J* and graphical plots of monitoring results are shown in *Appendix K*.

Table 3-4 Summary of 1-hour TSP Monitoring Results

	1-hour TSP (μg/m³)							
Station ID	Monitoring Location	Average (Range)	No. of Event	Action Level	Limit Level			
DM-1	Shan Ha Tsuen House No. 613F	47 (25 – 72)	18	260	500			
DM-2	Village House along Kung Um Road	60 (35 – 85)	18	260	500			

3.6.3 In the Reporting Period, all the 1-hour TSP monitoring results were below the Action/Limit Levels and no corrective action was therefore required.

## 4 CONSTRUCTION NOISE MONITORING

# 4.1 MONITORING REQUIREMENTS

- 4.1.1 Construction noise monitoring should be carried out at the designated monitoring station when there are Project-related construction activities being undertaken within a 300m from the monitoring stations. The monitoring frequency should depend on the scale of the construction activities. An initial guide on the monitoring is to obtain one set of 30-minutes measurement at each station between 0700 and 1900 hours on normal weekdays at a frequency of once a week when construction activities are underway.
- 4.1.2 During normal construction working hour (0700-1900 Monday to Saturday), monitoring of Leq, (30min) noise levels (as six consecutive Leq, (5min) readings) shall be carried out at the agreed monitoring locations once every week. If construction works are extended to include works during the hours of 1900 0700, applicable permits under NCO shall be obtained by the Contractor and strictly followed. A schedule on the compliance monitoring shall be submitted to the ER and IEC for approval before the monitoring starts.
- 4.1.3 In case of non-compliance with the construction noise criteria, more frequent monitoring, as specified in the Event and Action Plan in the following section, shall be carried out. This additional monitoring shall be continued until the recorded noise levels are rectified or proved to be irrelevant to the construction activities.

#### 4.2 MONITORING LOCATIONS

4.2.1 The most representative and affected Noise Sensitive Receivers (NSRs) were selected as monitoring stations. Phasing of the Project has been addressed in the approved EIA report, according to the updated EM&A Manual, CM1a, CM2a, CM3, CM4, CM8a and CM9a are monitoring stations for the First Phase of YLS Development. For planned NSRs CM11, CM12, CM13, CM14 and CM15, they are future developments and not yet constructed and construction noise monitoring shall perform after these NSRs being occupied. The locations of construction noise monitoring stations under YLS First Phase Development are summarized in *Table 4-1* and illustrated in *Appendix E*.

**Table 4-1** Construction Noise Monitoring Stations

Monitoring Station ID Monitoring Location		Description of location	Measurement Point
Existing Noise	Sensitive Receivers		
CM1a	Village house in Shan Ha Tsuen	Squatter house near Shan Ha Tsuen Village house no. 354	Façade
CM2a	Village house in Tin Lung Yuen	Village house No. 126E in Tin Lung Yuen	Free field
CM3	Village house in Lung Tin Tsuen	Village house at 66 Kiu Hing Road	Façade
CM4	Village house in Tin Liu Tsuen	Village house in Tin Liu Tsuen - Kam Fong Yuen	Façade
CM8a	Village House in Eldorado	Village House in Sha Tseng Tsuen (lot no. DD1211462A)	Free field
СМ9а	Village house in Pak Sha Tsuen	Village house No. 12 of Pak Sha Tsuen	Free field
Planned Nois	se Sensitive Receivers		
CM11	Public housing	No measurement before occupation of	No
CM12	Public housing	planned receivers (by other contract)	measurement
CM13	Village rehousing		was
CM14	Public housing		conducted
CM15	Planned primary school (opposite		
	to Pak Sha Tsuen)		

# 4.3 MONITORING EQUIPMENT

4.3.1 As referred to in the Technical Memorandum (TM) issued under the NCO, sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and

804: 1985 (Type 1) specifications were used for carrying out the noise monitoring. Sound level meter shall be checked by an acoustic calibrator. Wind speed shall be checked with a portable wind speed meter which is capable of measuring the wind speeds in m/s.

4.3.2 Noise monitoring equipment used for impact monitoring is listed in *Table 4-2*. The copies of calibration certificates of noise monitoring equipment were shown in *Appendix F2*.

**Table 4-2 Noise Monitoring Equipment** 

Equipment	Model	Serial No.
Integrating Sound Level	Rion NL-52	00142581
Meter	Rion NL-52	00464681
Calibrator	Rion NC-74	34657230
Cantilator	Rion NC-74	34657231

#### 4.4 MONITORING PROCEDURES

- 4.4.1 Immediately prior to and following each noise measurement, the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements would be accepted as valid only if the calibration level from before and after the noise measurement agrees to within 1.0 dB.
- 4.4.2 During the monitoring, the microphone of the sound level meter was normally set at a height of about 1.2m subject to site condition and oriented pointed to the site, with the microphone facing perpendicular to the line of sight. Where there a building façade, monitoring was conducted 1 m from the exterior of the building façade. For free field measurement, the microphone was positioned away from any reflective surface, and a correction of +3 dB(A) has been made for the free field measurements.
- 4.4.3 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level ( $L_{eq}$ ) measured in decibels dB(A). All noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level ( $L_{eq}$ ).  $L_{eq(30min)}$  in six consecutive  $L_{eq(5min)}$  measurements were used as the monitoring parameter for the time period between 0700-1900 hours on normal weekdays. As supplementary information for data auditing, statistical results such as A-weighted levels  $L_{10}$  and  $L_{90}$  shall also be obtained for reference.
- 4.4.4 After the monitoring, all the monitoring data stored in the sound level meter system were downloaded through the computer software, and all these data were checked and reviewed on computer.

### 4.5 ACTION AND LIMIT LEVELS FOR CONSTRUCTION NOISE

4.5.1 Following the guidelines for establishing the Action and Limit Levels for construction noise monitoring, the Action and Limit Levels are presented in *Table 4-3*. Should project-related non-compliance of the environmental quality criteria occur, remedial actions will be triggered according to the Event and Action Plan which is presented in *Appendix H*.

**Table 4-3** Action and Limit Levels for Construction Noise

<b>Monitoring Station ID</b>	Time Period <sup>(1)</sup>	Action Level	Limit Level
CM1a, CM2a, CM3,	0700 – 1900 hours on	When one documented	$75 \text{ dB}(A)^{(2)}$
CM4, CM8a and	normal weekdays	complaint is received at	
CM9a, CM11, CM12,		anytime during the	
CM13, CM14 &		construction period	
CM15			

Notes:

- (1) If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.
- (2) 70 dB(A) and 65 dB(A) for schools during normal teaching periods and school examination periods, respectively.

#### 4.6 Noise Monitoring Results

- 4.6.1 In light of the commencement of non-designated works under the Project, the EM&A Programme in relevant sections was initiated on 13<sup>th</sup> July 2023 to fulfill the contractual and EM&A Manual requirements. Construction noise monitoring was carried out at the designated monitoring station when there are project-related construction activities being undertaken within a 300m from the monitoring stations.
- 4.6.2 In the Reporting Period, 4 sessions of noise measurements were carried out at designated monitoring stations CM1a, CM2a, CM3, CM4 and CM8a, which are within a 300m of the project-related construction activities. The noise monitoring results are summarised in *Table 4-4*. The detailed noise monitoring data are presented in *Appendix J* and the relevant graphical plots are shown in *Appendix K*.

**Table 4-4** Summary of Construction Noise Monitoring Results

	Construction Noise Level (Leq30min), dB(A)					
Station ID	Description of location	Range	No. of Event	<b>Action Level</b>	Limit Level	
CM1a	Squatter house near Shan Ha Tsuen Village house no. 354	54 – 64	4	When one documented complaint is received at anytime during the construction	75	
CM2a (*)	Village house No. 126E in Tin Lung Yuen	61 – 73	4		75	
CM3	Village house at 66 Kiu Hing Road	64 – 69	4		75	
CM4	Village house in Tin Liu Tsuen - Kam Fong Yuen	67 – 71	4		75	
CM8a (*)	Village House in Sha Tseng Tsuen (lot no. DD1211462A)	55 - 62	4	period	75	

Remarks

4.6.3 As shown in *Table 4-4*, no construction noise measurement results triggered the Limit Level (75 dB(A)) in the Reporting Month. Moreover, no valid noise complaint (which triggered Action Level exceedance) was recorded in the Reporting Period.

<sup>(\*)</sup> Noise measurements was conducted at free field condition and façade correction (+3 dB(A) was added according to acoustical principles and EPD guidelines

# 5 WATER QUALITY MONITORING

# 5.1 MONITORING REQUIREMENTS

- 5.1.1 The impact monitoring shall be conducted during construction period at the monitoring stations for YLS First Phase Development. The purpose of impact monitoring is to ensure the implementation of the recommended mitigation measures, provide effective control of any malpractices, and provide continuous improvements to the environmental conditions. The interval between two sets of monitoring shall not be less than 36 hours. EPD shall also be notified immediately for any changes in schedule.
- 5.1.2 In general, where the difference in value between the first and second in-situ measurement of DO or turbidity parameters is more than 25% of the value of the first reading, the reading shall be discarded and further readings should be taken.
- 5.1.3 In case of project-related exceedances of Action and/or Limit Levels, the impact monitoring frequency shall be increased according to the requirement of Event and Action Plan in the following section.
- 5.1.4 The monitoring frequency and water quality parameters for impact monitoring is summarized in *Table 5-1*.

Table 5-1 Water Quality Monitoring Programme for Impact Monitoring

Item	Impact Monitoring
Monitoring Period	During construction period
Monitoring Frequency	3 Days in a Week
Monitoring Locations	All stations under YLS First Phase Development
Monitoring Parameters	Dissolved oxygen (DO), dissolved oxygen saturation (DO%), temperature, turbidity, salinity, pH and suspended solids (SS)
Intervals between 2 Sets of Monitoring	Not less than 36 hours

# **5.2** MONITORING LOCATIONS

5.2.1 According to the geographic locations of Contract 1, Contract 2 and Contract 3 under the First Phase YLS Development, the water quality monitoring locations with the purpose of monitoring are proposed in the updated EM&A Manual. The selection criterion for monitoring locations is based on the separation distance between work boundary of YLS First Phase Development and the river / stream. The water monitoring stations in respective with Contract 1, Contract 2 and Contract 3 are summarized in *Table 5-2, Table 5-3* and *Table 5-4*. Monitoring stations with work boundary of Contracts 1, 2 and 3 are illustrated in *Appendix E*.

Table 5-2 Locations of Water Quality Monitoring Stations for Impact Monitoring for Contract 1

WCD	Monitoring	toring Description Co-ordi		dinates

WSK	Station ID	Description	Easting	Northing
S02 (near TYST)	M5a	M5a Upstream monitoring of Contract 3		832535
S03 (near Windsor Garden)	M6a	Upstream monitoring of Contract 3	819335	832170
S02/S03 (near TYST & Windsor Garden)	D2a	Impact monitoring of Contract 3	819867	833939
S17	M7a	Upstream monitoring of Contract 3	818761	832798
(Along Kiu Hung Road)	D5a	Impact monitoring of Contract 3	818484	833362

- 5.2.2 If the water level of a monitoring station is too shallow when sampling, sediment would be disturbed which affecting the accuracy of water quality monitoring. In order to avoid disturbing sediment, depth limits should be set up for the water sampling for the ease of reference. When the measured water depth of the monitoring station (both control and impact stations) is lower than 150mm, water monitoring would not be to perform at that monitoring location. Instead, the monitoring location will be moved to a temporary alternative location monitoring location based on the criteria below:-
  - (a) the alternative location should be either upstream or downstream of the original location and at the same the river/drain channel
  - (b) the alternative location should be within 15m far from the original location
  - (c) if no suitable alternative location could be found within 15m far from the original location, the sampling at that location will be cancelled since sampling at too far from the designated location could not make a representative sample.

## 5.3 MONITORING EQUIPMENT

# Positioning of Monitoring Locations

5.3.1 A digital Global Positioning System (GPS) was used during water monitoring to ensure the monitoring vessel is at the correct location when taking measurement and samples.

# Dissolved Oxygen, Dissolved Oxygen Saturation, Temperature, Turbidity, Salinity and pH value

5.3.2 The YSI Professional DSS Multiparameter Sampling Instrument was used for water in-situ measures, which automates the measurements and data logging of temperature, dissolved oxygen, dissolved oxygen saturation, turbidity, pH and salinity simultaneously.

## Water Depth Detector

5.3.3 Measures tape was used for water depths determination at each designated monitoring station throughout the monitoring programme.

## Water Sampling Equipment

5.3.4 Water sample collection was directly from water surface use sampling plastic bottle or sampling bucket to avoid inclusion of bottom sediment or humus. Teflon/stainless steel bailer maybe used for water sampling. The use of water sampling equipment depends on the depths of sampling locations.

# Sample Containers and Storage

5.3.5 Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen) and shipment to the testing laboratory. The samples shall be delivered to the laboratory within 24 hours of collection and be analysed as soon as possible after collection.

#### Calibration

5.3.6 The YSI Professional DSS Multiparameter Sampling Instrument was certified by a laboratory accredited under HOKLAS or any other international accreditation scheme, and subsequently re-calibrated at quarterly basis throughout all stages of the water quality monitoring. Responses of sensors and electrodes should be checked with certified standard solutions before each use. Wet bulb calibration for a DO meter shall be carried out before measurement at each monitoring station.

### **Back-up Equipment**

- 5.3.7 Backup monitoring equipment shall also be made available so that monitoring can proceed uninterrupted even when some equipment is under maintenance, calibration, malfunction, etc.
- 5.3.8 Water quality monitoring equipment used for the impact monitoring are listed in *Table 5-5*. All in-situ measurement equipment were calibrated by HOKLAS accredited laboratory of three-month interval. Copies of calibration certificates for water quality monitoring equipment are shown in *Appendix F3*.

**Table 5-5** Water Quality Monitoring Equipment

Equipment	Model	Serial No.
Water Depth Detector	Measure tape	N/A
Thermometer & DO		[20J101862/ 15H103928]/

Storage Container	'Willow' 33-litter plastic cool box with Ice	N/A
Storage Container	pad	

## 5.4 MONITORING PROCEDURES

5.4.1 Water quality monitoring was conducted at all designated monitoring locations. In-situ of replicate measurements was undertaken during baseline monitoring; where the difference in value between the first and second in-situ measurement of DO or turbidity parameters is more than 25% of the value of the first reading, the reading was discarded then further readings to be take. Moreover, duplicate sample collection was also conducted from each monitoring location. The sampling and in-situ measurement process are below:

## Sampling Procedure

- 5.4.2 A Digital Global Positioning System (GPS) was used to identify the designated monitoring stations. Prior to water sampling, measure tape was used for the determination of water depth at each station.
- 5.4.3 Where water depth is allowed, sampling should be conducted at three water depths which are 1m below water surface, mid-depth, and 1m above the river bed. If the sampling water depth is less than 6m, the mid-depth may be omitted. If the water depth is less than 3m, only the mid-depth may be omitted.
- 5.4.4 During the baseline water quality monitoring, the water depths of all stations were less than 3m, therefore, water samples were collected from 0.1m below water surface or water surface to prevent the river bed sediment for stirring.

- 5.4.5 The sample container was rinsed with a portion of the water sample. The water sample then was transferred to the high-density polythene bottles as provided by the laboratory, labeled with a unique sample number and sealed with a screw cap.
- 5.4.6 Before commencement of the sampling, general information such as the date and time of sampling and weather condition as well as the personnel responsible for the monitoring were be recorded on the monitoring field data sheet.
- 5.4.7 A 'Willow' 33-liter plastic cool box packed with ice was used to preserve the collected water samples prior to arrival at the laboratory for chemical determination. The water temperature of the cool box was maintained at a temperature as close to 4°C as possible without being frozen. Samples collected were delivered to the laboratory upon collection.

## In-situ Measurement

5.4.8 YSI Professional DSS Multiparameter Sampling Instrument was used for water in-situ measures, which automates the measurements and data logging of water temperature, dissolved oxygen & dissolved oxygen saturation, pH unit and salinity. Before each round of monitoring, the instrument was checked in accordance with the manufactory manual instruction to sure it is valid.

#### 5.5 LABORATORY MEASUREMENT / ANALYSIS

5.5.1 Two replicate samples from each independent sampling event are required for the SS analysis. Sufficient water samples shall be collected at the monitoring stations for carrying out the laboratory measurement and analysis. The SS analysis were carried out by a local HOKLAS-accredited laboratory - *ALS Technichem (HK) Pty Ltd* and the HOKLAS-accreditation certificate of the testing laboratory is shown in *Appendix E4*. The laboratory determination work shall start within 24 hours after collection of the water samples. The analysis for suspended solids is presented in *Table 5-6*.

Table 5-6 Laboratory Analysis

Parameters	<b>Analytical Method</b>	Reporting Limit
Suspended Solid (SS)	APHA 2540-D	0.5mg/L

## Action/Limit Levels for Water Quality for YLS First Phase Development

5.5.2 Following the guidelines for establishing the Action and Limit Levels for water quality monitoring, the Action and Limit Levels for of Contract 1, Contract 2 and Contract 3 under YLS First Phase Development are presented in *Table 5-7* to *Table 5-9*. Should project-related non-compliance of the environmental quality criteria occur, remedial actions will be triggered according to the Event and Action Plan which is presented in *Appendix H*.

Table 5-7 Action and Limit Levels for Water Quality Monitoring for Contract 1

## 5.6 WATER QUALITY MONITORING RESULTS

5.6.1 In the Reporting Period, a total of **thirteen (13)** days water quality monitoring were conducted at various stations, including M1a, M2a, M3, M4, U3, U4a, M5a, M6a, D2a, M7a, D5a, U1b, U2a and EIS-1a. The key monitoring parameters including DO, Turbidity and SS are summarised in *Tables 5-10 to 5-12*. Summary of non-project related exceedances are shown in *Table 5-13*. Detailed water quality monitoring result are shown in *Appendix J* and the relevant graphical plot are shown in *K I*.

Table 5-10 Water Quality Monitoring Results for Dissolved Oxygen

Monitoring Station	DO (mg/L) Average (range)	Action Level (mg/L)	Limited Level (mg/L)		
M1a	5.6 (3.5 – 7.5)	1.3	1.2

Table 5-14 Summary of Investigation Result for Water Quality Monitoring Exceedance

Date	Station	Parameter	Exceedance	Investigation	Action
14 August 2024	M2a, M3 and D2a	Turbidity and Suspended Solids	Limit Level	During water quality monitoring conducted on 14 August 2024, turbid water was observed at M3 and its upstream station U1b, and D2a and its upstream station M5a.  There were no major construction works conducted near M2a, M3 and pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge.  The Contractor was reminded continually fully implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
23 August 2024	M3, EIS-1a and D2a	Turbidity	Limit Level	During water quality monitoring conducted on 23 August 2024 turbid water were observed at M3, EIS-1a and D2a.  There were no major construction works conducted near EIS-1a and M3. Pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge.  The Contractor was reminded continually fully implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.

## 6 ECOLOGY MONITORING

# 6.1 REQUIREMENTS

6.1.1 As required under Section 8.3 of the updated EM&A Manual, wherever applicable, the implementation of the mitigation measures applicable to the three Contracts of the First Phase Development of the Project shall be audited regularly during the construction phase, the establishment phase of the mitigation measures and/or the early (the first 12 months of) operation phase of the Project.

# Monitoring of Transplantation of Flora Species of Conservation Importance

- 6.1.2 Prior to commencement of construction works, an updated baseline survey was conducted by a qualified botanist/ plant ecologist within the proposed works area(s) to identify and update the conditions of any flora species of conservation importance. A Baseline Vegetation Survey and Transplantation Proposal would been prepared to confirm the locations, quantities and conditions of any identified flora species of conservation importance within the works area(s), and proposed methodology and receptor site(s) to transplant any of these specimens that are to be affected by the construction works.
- 6.1.3 Based on the result of the Vegetation Survey, flora species of conservation importance was not recorded within the works area(s). There would be no transplantation of flora species of conservation importance, and relevant monitoring is not required for the Project.

# Monitoring of Mitigation Measures on Affected Aquatic Fauna of Conservation Importance

- 6.1.4 A baseline survey shall be conducted in all affected watercourses by a qualified ecologist of relevant experience to confirm the presence, relative abundance, and distribution of any aquatic species of conservation importance prior to any commencement of works which would lead to watercourse loss. A translocation programme shall be designed and developed with relevant authorities to translocate any affected aquatic fauna species of conservation importance. Capture and translocation of species to suitable permanent receptor site(s) (e.g. the retained natural watercourses in PDA or the recreated watercourse) or a holding area shall be conducted by a suitably qualified ecologist before the commencement of any construction works.
- 6.1.5 In view of commencement of preparation work at Yuen Long Nullah, baseline survey for the presence of aquatic species of conservation importance was conducted at the affected sections of the Nullah by the qualified ecologist of ET on 24<sup>th</sup> November 2023. There were no aquatic species of conservation importance found and recorded. The relevant baseline report will be submitted separately. In the Reporting Period, only preparation work was conducted at Yuen Long Nullah and no works would lead to watercourse.
- 6.1.6 Another baseline survey would be conducted for commencement of works which would lead to watercourse loss for other section of works.

# <u>Monitoring of Mitigation Measures to Minimize Disturbance Impacts to Tai Tong (Pak Sha Tsuen)</u> Egretry

6.1.7 Prior to commencement of construction activities, a baseline egretry survey was conducted during the breeding season to confirm the location of egretry, evidence of egretry occupation and number of breeding pairs. Based on the survey result, no egretry was found within 250m of the project boundary. Therefore, the relevant monitoring and flight-line surveys was not required in the Reporting Period.

# 7 LANDSCAPE AND VISUAL MONITORING

# 7.1 MONITORING REQUIREMENTS

7.1.1 The EIA has recommended EM&A for landscape and visual mitigation measures to be undertaken during the design, construction and operational stages of the project. The design, implementation and maintenance of landscape mitigation measures is a key aspect and should be checked to ensure that they are fully realised and that potential conflicts between the proposed landscape measures and any other project works and operational requirements are resolved at the earliest possible date and without compromise to the intention of the mitigation measures. In addition, implementation of the mitigation measures recommended by the EIA will be monitored through the site audit programme.

# 7.2 MITIGATION MEASURES

7.2.1 The Landscape and Visual Assessment of the EIA proposes a number of mitigation measures to ameliorate the landscape and visual impacts of the Project. These measures are listed in table below and implementation is summarised in the EMIS.

Table 7-1 Proposed Mitigation Measures for Landscape and Visual Impacts

Mitigation Measure Code	Summary Description	Mitigate Landscape Impacts	Mitigate Visual Impacts	Related to Contract
Construction 1	Phase			
CM1	Optimisation of Construction Areas and Providing Temporary Landscape on Temporary Construction	V	V	C1, C2, C3
CM2	Minimise Topographical Changes	$\checkmark$	$\checkmark$	C1, C2, C3
CM3	Tree Protection and Preservation	$\sqrt{}$		C1, C2, C3
CM4	Transplanting of Existing Trees	$\checkmark$		C1, C2, C3
CM5	Screen Hording		$\sqrt{}$	C1, C2, C3
CM6	Watercourses of higher ecological value / Channels Protection	V		C2, C3
CM7	Construction Light Control		√	C1, C2, C3
CM8	Woodland Conservation	V		Not related to YLS First Phase

7.2.2 Mitigation measures to be implemented during construction should be adopted from the start of construction and be in place throughout the entire construction period. Tree transplantation, preservation of Potentially Registerable Old and Valuable Trees (POVTs), Rare and Protective Vegetation, and compensatory planting should be carried out as early as possible in the Project with transplantation carried out prior to construction starting in any particular area.

# 7.3 AUDIT REQUIREMENT

7.3.1 Site audits should be undertaken during the construction phase of the Project to check that the proposed landscape and visual mitigation measures are properly implemented and maintained as per their intended objectives. Site inspections should be undertaken by the ET at least once every two weeks during the construction period. In addition, as the Project contains various Schedule 2 DPs, site inspection program for these DPs shall make reference to the project details and works progress to schedule the inspection works. Particularly audits should be carried out during site clearance when proposed tree retain, tree felling, and transplantation may occur.

#### 7.4 AUDIT RESULT

7.4.1 Bi-weekly inspection of landscape and visual impact and mitigation measures were conducted by ET during the weekly site inspection. It was observed that six individual trees under Contract 2 transplanted to the nursery site were in fair condition. For Contract 3, the nursery site for transplanted tree were properly maintained by the Contractor, and the transplanted trees were in fair health condition.

## **8 WASTE MANAGEMENT**

## 8.1 GENERAL WASTE MANAGEMENT

8.1.1 Waste management was carried out in accordance with the Waste Management Plan for the Contract.

# **8.2** RECORDS OF WASTE QUANTITIES

- 8.2.1 All types of waste arising from the construction work are broadly classified into the following:
  - Insert construction & demolition (C&D) Material; and
  - C&D waste
- 8.2.2 The Contractors are advised to minimise the wastes generated through recycling or reusing. All mitigation measures stipulated in the Updated EM&A Manual and waste management plans shall be fully implemented.
- 8.2.3 The quantities of waste for disposal under Contract 1, Contract 2 and Contract 3 in this Reporting Period are summarized in *Tables 8-1* and *8-2* and they are made reference to the Waste Flow Table provide by the Contractors which shown in *Appendix L*.

Table 8-1 Summary of Quantities of Inert C&D Materials

Type of Waste	Contract 1		Contract 2		Contract 3	
	Quantity (tones)	Disposal Location	Quantity (tones)	Disposal Location	Quantity (tones)	Disposal Location

# 9 SITE INSPECTION

# 9.1 REQUIREMENTS

9.1.1 According to the updated EM&A Manual, the programme of environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections were carried out to confirm the environmental performance.

#### 9.2 FINDINGS / DEFICIENCIES DURING THE REPORTING PERIOD

#### Contract 1

- 9.2.1 In the Reporting Period, joint site inspections to evaluate the site environmental performance for Contract 1 were carried out by the representatives of the RE, ET and the Contractor on 8<sup>th</sup>, 15<sup>th</sup>, 22<sup>nd</sup> and 28<sup>th</sup> August 2024. No non-compliance was noted.
- 9.2.2 The findings / deficiencies observed for *Contract 1* during the weekly site inspection are listed in *Table 9-1*.

Table 9-1 Site Inspection and Observations for Contract 1

Date	Findings / Deficiencies	Follow-Up Status
8 <sup>th</sup> August 2024	• The Contractor should spray water at haul road regularly to reduce dust impact. (Portion 3)	• The haul road was sprayed with water to reduce dust impact.
15 <sup>th</sup> August 2024	The Contractor should provide sandbags along boundary to avoid muddy water run into drainage system. (Portion3)	The sandbags were deployed along site boundary.
22 <sup>nd</sup> August 2024	The Contractor should remove or place chemical containers inside drip tray to prevent leakage. (Portion 4)	The chemical containers were removed and relocated to designated storage area.
28 <sup>th</sup> August 2024	<ul> <li>The Contractor should spray water at haul road regularly to reduce dust impact. (Portion 4)</li> <li>The Contractor should dispose waste properly to enhance house-keeping. (Portion 4)</li> </ul>	<ul> <li>The haul road was sprayed with water to reduce dust impact.</li> <li>The waste was disposed properly to enhance house-keeping.</li> </ul>

- 9.2.3 There were several reminders given to the Contractor to enhance the environmental site performance. They are summarized below:-
  - To remove stagnant water regularly after rainy day.
  - To remove or cover sandy stockpile peoperly with tarpaulin sheet.
  - To ensure all wastewater must be treat before discharge.
  - To provide mitigation measures to remove stagnant water and prevent mosquito breeding.

#### Contract 2

- 9.2.4 In the Reporting Period, joint site inspections to evaluate the site environmental performance for Contract 2 were carried out by the representatives of the RE, ET and the Contractor on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 30<sup>th</sup> August 2024. No non-compliance was noted.
- 9.2.5 The findings / deficiencies observed for *Contract 2* during the weekly site inspection are listed in *Table 9-2*.

Table 9-2 Site Inspection and Observations for Contract 2

Date	Findings / Deficiencies	Follow-Up Status
7 <sup>th</sup> August 2024	• The Contractor should provide new acoustic mat for sheet pilling machine to reduce noise impact. (Portion 12)	
	• The Contractor should remove or place	Chemical container has been

Date	Findings / Deficiencies	Follow-Up Status
	chemical containers inside drip tray to prevent leakage. (CUT)	removed
14 <sup>th</sup> August 2024	<ul> <li>The Contractor should clean oil stain at haul road to prevent leakage to drainage system. (Portion 1A)</li> <li>The Contractor should provide mitigation measures to avoid muddy water runout to drainage system .(Portion 1A)</li> </ul>	<ul> <li>Oil stain has been removed from haul road.</li> <li>Oil stain has been removed from haul road.</li> </ul>
21 <sup>st</sup> August 2024	No adverse environmental impact was observed.	N/A
30 <sup>th</sup> August 2024	No adverse environmental impact was observed.	N/A

- 9.2.6 There were several reminders given to the Contractor to enhance the environmental site performance. They are summarized below:-
  - To dispose waste properly to enhance house-keeping.
  - To remove stagnant water after rainy day.
  - To ensure all wastewater must be treat before discharge to public.
  - To provide mitigation measures to prevent cumulated soil, rock and muddy water run into drainage system.
  - To provide mitigation for nullah work to prevent surface water and muddy water overflow.
  - To pay special attention on site construction work to reduce water quality affected.
- 9.2.7 General housekeeping such as site tidiness and cleanliness should be maintained for all works areas. Furthermore, the Contractor was reminded to implement the Waste Management Plan of the Contracts.

### Contract 3

- 9.2.8 In the Reporting Period, joint site inspections to evaluate the site environmental performance for Contract 3 were carried out by the representatives of the RE, ET and the Contractor on 2<sup>nd</sup>, 8<sup>th</sup>, 15<sup>th</sup>, 22<sup>nd</sup> and 29<sup>th</sup> August 2024. No non-compliance was noted.
- 9.2.9 The findings / deficiencies observed for *Contract 3* during the weekly site inspection are listed in *Table 9-3*.

Table 9-3 Site Inspection and Observations for Contract 3

Date	Findings / Deficiencies	Follow-Up Status
2 <sup>nd</sup> August 2024	The Contractor should provide drip tray for chemical containers to prevent leakage. (NSB)	The chemical containers were removed.
8 <sup>th</sup> August 2024	<ul> <li>The Contractor should provide new NRMM label for excavator. (Portion 6A)</li> <li>The Contractor should remove empty cement bags to prevent dust impact. (Poriton 6A)</li> </ul>	<ul> <li>New NRMM label was attached to the excavator.</li> <li>Emptied cement bags were removed.</li> </ul>
15 <sup>th</sup> August 2024	No adverse environmental impact was observed.	N/A
22 <sup>nd</sup> August 2024	The Contractor should provide mitigation measures for GI work to prevent muddy water leakage.	Sandbags were placed at site boudary to prevent muddy water leakage.
29 <sup>th</sup> August 2024	No adverse environmental impact was observed.	N/A

9.2.10 There were several reminders given to the Contractor to enhance the environmental site performance.

### CEDD Service Contract No. WD/07/2022 Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring & Audit Report – August 2024

They are summarized below:-

- To remove stagnant water regularly after rainy day.
- To remove muddy water regularly to prevent leakage.
- To ensure all wastewater must be treat before discharge.
- To pay special attention on water quality on drainage system.
- To remove or cover sandy stockpile properly with tarpaulin sheet
- 9.2.11 General housekeeping such as site tidiness and cleanliness should be maintained for all works areas. Furthermore, the Contractor was reminded to implement the Waste Management Plan of the Contracts.

#### 10 ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCES

### 10.1 Environmental Complaints, Summons and Prosecutions

- 10.1.1 There was no environmental complaint, prosecution or notification of summons received in the Reporting Period.
- 10.1.2 The statistical summary table of the environmental complaints, summons and prosecutions are presented in *Tables 10-1*, *10-2* and *10-3*. Detailed complaint log for the Contract is presented in *Appendix M*.

**Table 10-1 Statistical Summary of Environmental Complaints** 

Donouting Povied	Contract No	<b>Environmental Complaint Statistics</b>		
Reporting Period		Frequency	Cumulative	<b>Complaint Nature</b>
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 1	0	0	NA
August 2024	Contract 1	0	U	NA
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 2	0	0	NA
August 2024	Contract 2	0	U	NA
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 3	0	0	NA
August 2024	Contract 3	0	U	NA

Table 10-2 Statistical Summary of Environmental Summons

Reporting Period	Contract No	<b>Environmental Summons Statistics</b>		
Reporting Feriod	Contract No	Frequency	Cumulative	<b>Summons Nature</b>
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 1	0	0	NA
August 2024	Contract 1	0	U	NA
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 2	0	0	NA
August 2024	Contract 2	0	U	NA
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 3	0	0	NA
August 2024	Contract 3	0	U	NA

Table 10-3 Statistical Summary of Environmental Prosecution

		<b>Environmental Prosecution Statistics</b>			
Reporting Period	Contract No	Frequency	Cumulative	Prosecution Nature	
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 1	0	0	NA	
August 2024	Contract 1	0	U	NA	
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 2	0	0	NA	
August 2024	Contract 2	0	U	NA	
13 <sup>th</sup> July 2023 – 31 <sup>st</sup> July 2024	Contract 3	0	0	NA	
August 2024	Contract 3	0	U	NA	

### 10.2 OTHER ENVIRONMENTAL NON-COMPLIANCES

10.2.1 In addition, no emergency events related to violation of environmental legislation for illegal dumping and landfilling were received in the Reporting Period.

#### 11 IMPLEMENTATION STATUS OF MITIGATION MEASURES

### 11.1 GENERAL REQUIREMENTS

- 11.1.1 The environmental mitigation measures that recommended in the ISEMM in the EM&A Manual covered the issues of dust, noise, water and waste and they are summarised presented in *Appendix N*.
- 11.1.2 The Contract Works under the Project shall be implementing the required environmental mitigation measures according to the EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by the Contractor and the implementation status are shown in *Appendix N*.

### 11.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

11.2.1 According to information provided by the Contractor, the construction works under the Contract in the coming month are listed below:

Table 11-1 Summary of Construction Activities in the next Reporting Period

Contract No.	Construction Activities undertaken in next Reporting Period			
	Non-designated work	Designated work		
YL/2021/03 (Contract 1)	<ul> <li>Demolition works</li> <li>Site Hoarding</li> <li>Site Clearance</li> <li>Site Formation</li> <li>Construction of drainage system</li> </ul>	N/A		
YL/2021/04 (Contract 2)	<ul> <li>Soil Excavation</li> <li>Temporary access and haul road formation</li> <li>Road Set back works</li> <li>ELS and Construction for CUT</li> <li>Construction of retaining wall</li> <li>Ground Investigation</li> <li>Site Clearence</li> <li>Construction of Silent Pile</li> </ul>	<ul> <li>EP-553/2018/A</li> <li>Construction of retaining wall</li> <li>Sheetpile installation</li> <li>Trial Trench Excavation</li> </ul> EP-549/2018 <ul> <li>Site clearance</li> </ul>		
YL/2022/01 (Contract 3)	<ul> <li>Site Clearance</li> <li>GI Works</li> <li>Tree Felling</li> <li>Demolition</li> <li>Decontamination</li> <li>Construction of Retaining Wall</li> <li>Construction of Box Culvert BC01</li> <li>Pre-bored H pile</li> </ul>	EP-548/2018/A  • Bored Pile Construction for Bridges D, F & G  EP-549/2018 • Nil  EP-550/2018/A • Nil  EP-551/2018/A • Nil		

### 11.3 KEY ISSUES FOR THE COMING MONTH

- 11.3.1 Key issues for the coming month include the following:
  - Implementation of control measures for rainstorm;
  - Regular clearance of stagnant water;
  - Implementation of dust suppression measures at all times;
  - Potential wastewater quality impact due to surface runoff;
  - Potential fugitive dust quality impact due from the dry/loose/exposure soil surface/dusty material;

### CEDD Service Contract No. WD/07/2022 Yuen Long South First Phase Development – Environmental Team Monthly Environmental Monitoring & Audit Report – August 2024

- Disposal of empty engine oil containers within site area;
- Ensure dust suppression measures are implemented properly;
- Sediment catch-pits and silt removal facilities should be regularly maintained;
- Management of chemical wastes;
- Discharge of site effluent to the nearby wetland, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
- Follow-up of improvement on general waste management issues; and
- Implementation of construction noise preventative control measures.

#### 12 CONCLUSIONS AND RECOMMENDATIONS

#### 12.1 CONCLUSIONS

- 12.1.1 This is the Monthly EM&A Report presenting the monitoring results and inspection findings for the Project, for the Reporting Period from 1<sup>st</sup> to 31<sup>st</sup> August 2024.
- 12.1.2 No 1-hour TSP of air quality monitoring result that triggered the Action or Limit Levels was recorded. No corrective action was required.
- 12.1.3 In this Reporting Period, no noise complaint (which is an Action Level exceedance) was received and no construction noise measurement result triggered the Limit Level was recorded in this Reporting Month. No corrective action was issued.
- 12.1.4 Exceedances of A/L levels were recorded on 14<sup>th</sup>, 23<sup>rd</sup> and 28<sup>th</sup> August 2024. Notification of Exceedance (NOE) with preliminary investigation and on-site observation were issued to all concerned parties, i.e. ER, Contractor and IEC. Investigation revealed that no major construction activities were conducted near the monitoring stations of M2a, M3 and EIS-1a, but pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment. It is considered that the exceedances were related to other source along the Nullah.
- 12.1.5 Bi-weekly inspection of landscape and visual impact and mitigation measures were conducted by ET during the weekly site inspection. It was observed that six individual trees under Contract 2 transplanted to the nursery site were in fair condition. For Contract 3, the nursery site for transplanted tree were properly maintained by the Contractor, and the transplanted trees were in fair health condition.
- 12.1.6 In the Reporting Month, no environmental complaint, summons and prosecution were received. In addition, no emergency events related to violation of environmental legislation for illegal dumping and landfilling were received.
- 12.1.7 In the Reporting Period, weekly joint site inspection to evaluate the site environmental performance had been carried out by the representatives of the Consultants, ET and the respective Contractor of Contract 1, Contract 2 and Contract 3. No non-compliance was noted during the site inspection. In addition, IEC carried out the joint site inspections for Contract 2 and Contractor 3 on 30<sup>th</sup> and 29<sup>th</sup> August 2024 respectively.

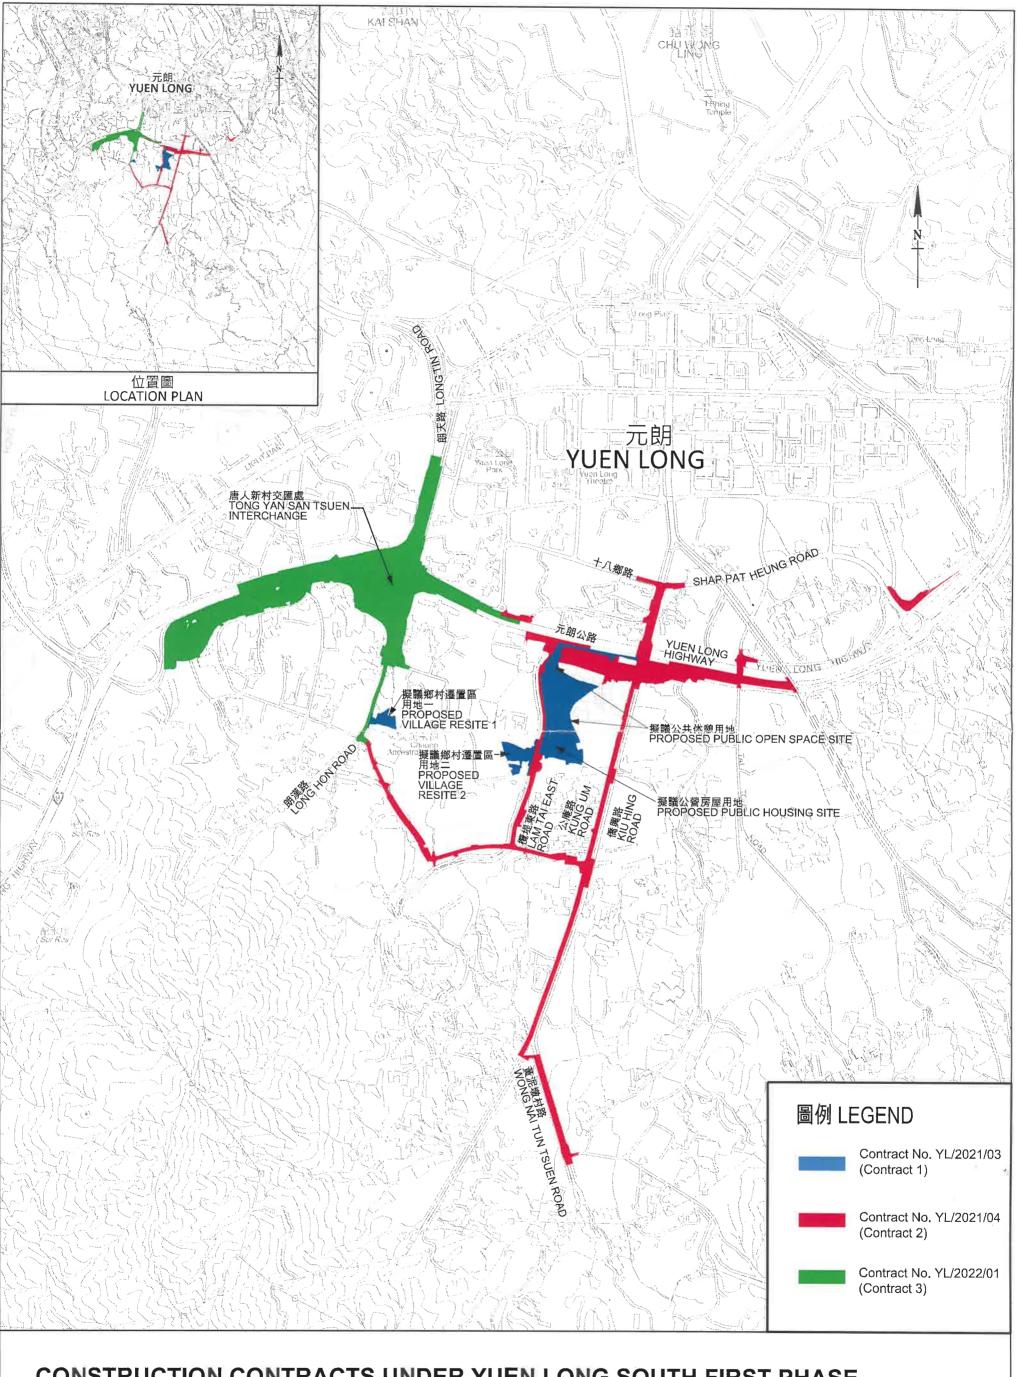

### 12.2 RECOMMENDATIONS

- 12.2.1 The Contractor should pay special attention on the water quality mitigation measures and fully implement according to the ISEMM of the EM&A Manual, in particular to prevent surface runoff with high SS content and other pollutants from flowing to stream. All effluent discharge shall be ensure to fulfill Technical Memorandum of Effluent Discharged into Drainage and Sewerage Systems, inland and Coastal Waters criteria or discharge permits stipulation.
- 12.2.2 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants and/ or using movable temporary noise barriers should be implemented as stipulated under EM&A Manual to ensure construction noise impacts at the NSRs comply with the noise criteria.
- 12.2.3 Since the Works Contract located adjacent to villages, potential construction dust impact should be minimised. The Contractor should fully implement the air quality mitigation measures to reduce construction dust emission as far as practicable.
- 12.2.4 All other mitigation measures recommended in the ISEMM of the EM&A Manual should be properly implemented and maintained as far as practicable.

#### SUB-CONTRACTING REPORT

CONTACT : MR BEN TAM

HK2404342 WORK ORDER

**CLIENT** 

: ACTION-UNITED ENVIRONMENTAL

**SERVICES & CONSULTING** 

**ADDRESS** 

: RM A 20/F., GOLD KING IND BLDG, NO. 35-41

TAI LIN PAI ROAD, KWAI CHUNG, N.T.

SUB-BATCH

DATE RECEIVED : 25-JAN-2024

DATE OF ISSUE : 5-FEB-2024

**PROJECT** 

NO. OF SAMPLES : 1 CLIENT ORDER

#### General Comments

Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.

- Result(s) of sample(s) is/are reported on as received basis, unless otherwise specified. The result(s) is/are related only to the item(s) tested.
- Calibration was subcontracted to and analysed by Action United Environmental Services & Consulting.
- Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in ambient condition.

ı	5	-0.4	-3.6	3.2	0.868	29	29.44	

#### Calculations :

Qstd = 1/m[Sqrt(H20(Pa/Pstd)(Tstd/Ta))-b]

IC = I[Sqrt(Pa/Pstd)(Tstd/Ta)]

Qstd = standard flow rate

IC = corrected chart response

I = actual chart response

m = calibrator Qstd slope

b = calibrator Qstd intercept

Ta = actual temperature during calibration ( deg K )

Pstd = actual pressure during calibration ( mm Hg )

### For subsequent calculation of sampler flow:

1/m(( I )[Sqrt(298/Tav)(Pav/760)]-b)

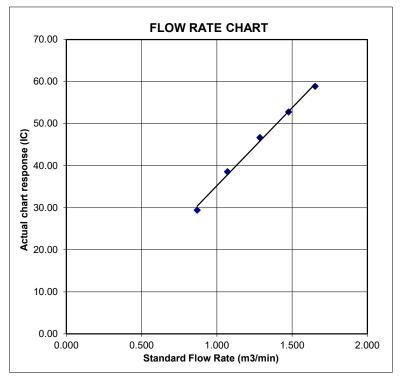

m = sampler slope

b = sampler intercept

I = chart response

Tav = daily average temperature

Pav = daily average pressure

TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only.

The results do not exceed specified limits.

These limits refer to manufacturer's published tolerances as requested by the customer.

The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via:

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Hottinger Brüel & Kjær Calibration Laboratory, Denmark
- Agilent Technologies / Keysight Technologies
- Fluke Everett Service Center, USA

# Certificate of Calibration 校正證書

Certificate No.:

C236946

證書編號

1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours before the commencement of the test.

2. The results presented are the mean of 3 measurements at each calibration point.

3. Test equipment:

Equipment ID

CL130 CL281

TST150A

Description

Universal Counter

Multifunction Acoustic Calibrator

Measuring Amplifier

Certificate No.

C233799 CDK2302738

C221750

4. Test procedure: MA100N.

5. Results:

5.1 Sound Level Accuracy

UUT	Measured Value	Mfr's Limit	Uncertainty of Measured Value
Nominal Value	(dB)	(dB)	(dB)
94 dB, 1 kHz	94.10	± 0.3	± 0.20

5.2 Frequency Accuracy

UUT Nominal Value	Measured Value	Mfr's	Uncertainty of Measured Value
(kHz)	(kHz)	Limit	(Hz)
1	1.002	1 kHz ± 1 %	± 1

Remark: The uncertainties are for a confidence probability of not less than 95 %.

#### Note

Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration is traceable to the National Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

本證書所載校正用之測試器材均可溯源至國際標準。局部複印本證書需先獲本實驗所書面批准。

## REPORT OF EQUIPMENT PERFORMANCE CHECK/CALIBRATION

CONTACT: BEN TAM WORK ORDER: HK2418475

**CLIENT:** ACTION-UNITED ENVIRONMENTAL SERVICES &

CONSULTING

ADDRESS: RM A 20/F., GOLD KING IND BLDG, SUB-BATCH:

NO. 35-41 TAI LIN PAI ROAD, LABORATORY: HONG KONG

KWAI CHUNG, N.T. **DATE RECEIVED:** 10-May-2024 **DATE OF ISSUE:** 22-May-2024

### **GENERAL COMMENTS**

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

The "Tolerance Limit" quoted is the acceptance criteria applicable for similar equipment used by the laboratory or quoted from relevant international standards.

The "Next Calibration Date" is recommended according to best practice principle as practised by the laboratory or quoted from relevant international standards.

The validity of equipment/ meter performance only applies to the result(s) stated in the report.

This report superseded any previous report(s) with same work order number.

### **EQUIPMENT INFORMATION**

Equipment information (Brand name, Model No., Serial No. and Equipment No.) is provided by client.

Equipment Type: Multifunctional Meter Service Nature: Performance Check

Scope: Conductivity, Dissolved Oxygen, pH Value, Turbidity, Salinity and Temperature

Brand Name/ Model No.: [YSI]/ [Professional DSS]

Serial No./ Equipment No.: [20J101862/15H103928]/ [EQW018]

Date of Calibration: 17-May-2024

16:5

### **Event / Action Plan for Water Quality**

	Event			
Event	ET	IEC	Action ER	Contractor
Action level exceedance for one sampling day	1. Repeat in-situ measurement on next day of exceedance to confirm findings;  2. Inform IEC, Contractor and ER;  3. Check monitoring data, all plant, equipment and Contractor's working methods; and  4. Discuss remedial measures with IEC and Contractor and ER.	1. Discuss with ET, ER and Contractor on the implemented mitigation measures;  2. Review proposals on remedial measures submitted by Contractor and advise the ER accordingly; and  3. Review and advise the ET and ER on the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the implemented mitigation measures;  2. Make agreement on the remedial measures to be implemented; and  3. Supervise the implementation of agreed remedial measures.	Identify source(s) of impact;     Inform the ER and confirm notification of the non-compliance in writing;     Rectify unacceptable practice;     Check all plant and equipment;     Consider changes of working methods;     Discuss with ER, ET and IEC and purpose remedial measures to IEC and ER; and     Implement the agreed mitigation measures.
Action level exceedance for more than one consecutive sampling days	1. Repeat in-situ measurement on next day of exceedance to confirm findings;  2. Inform IEC, contractor and ER;  3. Check monitoring data, all plant, equipment and Contractor's working methods;  4. Discuss remedial measures with IEC, contractor and ER; and  5. Ensure remedial measures are implemented.	1. Discuss with ET, Contractor and ER on the implemented mitigation measures;  2. Review the proposed remedial measures submitted by Contractor and advise the ER accordingly; and  3. Review and advise the ET and ER on the effectiveness of the implemented mitigation measures.	1. Discuss with ET, IEC and Contractor on the proposed mitigation measures;  2. Make agreement on the remedial measures to be implemented; and  3. Discuss with ET, IEC and Contractor on the effectiveness of the implemented remedial measures.	Identify source(s) of impact;     Inform the ER and confirm notification of the non-compliance in writing;     Rectify unacceptable practice;     Check all plant and equipment and consider changes of working methods;     Discuss with ET, IEC and ER and submit proposal of remedial measures to ER and IEC within 3 working days of notification; and     Implement the agreed mitigation measures
Limit level exceedance for one sampling day	1. Repeat measurement on next day of exceedance to confirm findings;  2. Inform IEC, contractor and ER;  3. Rectify unacceptable practice;  4. **Summary of Exceedance Records** 

# Summary of Investigation results of Exceedance of A/L Level for Water Quality Monitoring

Date	Station	Parameter	Exceedance	Investigation	Action
10 Oct 2023	D2a	Turbidity and Suspended Solids	Limit Level	There was heavy rainstorm on 9 and 10 Oct after typhoon. The water quality in the channel was deteriorated by runoff from the surrounding environment. It was concluded that the exceedances were not project related.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required.
8 Jan 2024	Mla	Turbidity and Suspended Solids	Limit Level	Turbid water was observed flowing from upstream of work area and reaching M1a and there was no construction work carried out in the respective section of nullah, and no discharge made from construction sites associated with the Project. It is concluded that the exceedances were not related to the works under the Project.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
19 Jan 2024	М3	Turbidity and Suspended Solids	Limit Level	Contractor of C2 advised that no pre-drill works were conducted between monitoring M1a and M3 on 19 Jan 2024, but preparation works for temporary deck was conducted. Mitigation measures such as the sandbag barrier, steel plate cover along the active work areas were in place and no muddy runoff into the Yuen Long Nullah is observed. It is concluded that the exceedances were not related to the works under the Project.	Repeat measurement of in-situ parameter turbidity was conducted on 20 January 2024 and no exceedance was recorded. As the exceedances were concluded as non-Project related, corrective action is not required.
19 Feb 2024	D2a (Note: instead of M1a as typo made in monthly EM&A report of Feb 24 and Mar 24)	Turbidity and Suspended Solids	Limit Level	The Contractor of C3 advised that no piling works or pre-drilling works had been conducted along Shan Ha Road nullah. Welding works of H-pile, TTA and housekeeping of nullah were being conducted on that day along the nullah. Based on ET's site inspection on 22 Feb 2024, it is observed that no piling works or pre-drilling works was observed to be conducted along Shan Ha Road nullah, and there was no discharge made from the site of C3. It is considered that the exceedances were unlikely due the Project.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
18 Mar 2024	M2a	Turbidity and Suspended Solids	Limit Level	During the course of monitoring, it was observed that turbid water was flowing from the outfall of public drains and contaminated the water quality in the M2a. The Contractor subsequently carried out detailed investigation and identified the source of impact and confirmed that there were no construction works under YLS construction site at upstream of M2a. Therefore, it is concluded that the exceedances on 18 March 2024 were unlikely due to project.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
22 Apr 2024	M2a D2a	DO, Turbidity and Suspended Solids	Limit Level	During water quality monitoring conducted on 22 April 2024, no major construction works was conducted near M2a, and pre-drilling & piling works were conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective

_	,					
					treatment facilities before discharge. In addition, the work area at Shan Ha Road Nullah under Contract 3 was far from D2a and there was other active construction site located at upstream of D2a.  According to the weather information from the	action is not required.
					Hong Kong Observatory, there were consecutive rainy days from 20 to 22 April 2024 with rainfall at 42.2mm, 81.6mm and 13.2mm respectively. This rainfall likely led to runoff from the surrounding environment, resulting in a deterioration of water quality in the channel or river course.	
					During water quality monitoring conducted on 24 April 2024, it was observed that the water in the throughout the channel affected by rainfall, including control station, gradient station and impact station.  There were no major construction works conducted near M2a, M3 & EIS-1a & D5a, and	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective
	24 Apr 2024	M2a M3 EIS-1a D5a D2a	DO, Turbidity and Suspended Solids	Limit Level	pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge. In addition, the work area at Shan Ha Road Nullah under Contract 3 was far from D2a and there was other active construction site located at upstream of D2a.  According to the weather information from the Hong Kong Observatory, there were rainy day on 23 April 2024 with rainfall at 40.0mm. This rainfall likely led to runoff from the surrounding environment and affected the water quality on the next day (24 Apr), resulting in a deterioration of water quality in the channel or river course.	action is not required.
	26 Apr 2024	M2a M3 EIS-1a D5a D2a	DO, Turbidity and Suspended Solids	Limit Level	During water quality monitoring conducted on 26 April 2024, it was observed that the water in the throughout the channel affected by rainfall, including control station, gradient station and impact station.  There were no major construction works conducted near M2a, M3 & EIS-1a & D5a, and pre-drilling works and bored piling works were conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge. In addition, the work area at Shan Ha Road Nullah under Contract 3 was far from D2a and there was other active construction site located at upstream of D2a.	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.

·					
				According to the weather information from the Hong Kong Observatory, there were heavy rainfall on 26 April 2024 with rainfall at 25.0mm. This rainfall likely led to runoff from the surrounding environment, resulting in a deterioration of water quality in the channel	
4 May 2024	M2a M3 EIS-1a M7a D5a D2a	DO, Turbidity and Suspended Solids	Limit Level	During water quality monitoring conducted on 4 May 2024, it was observed that the water in the throughout the channel affected by rainfall, including control station, gradient station and impact station.  There were no major construction works conducted near M2a, M3, EIS-1a, M7a & D5a and pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge.  According to the weather information from the Hong Kong Observatory, there were heavy rainstorm on 4 May 2024 with rainfall at	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
				75.1mm. This rainfall likely led to runoff from the surrounding environment, resulting in a deterioration of water quality in the channel or river course.	
21 May 2024	M1a M2a M3 EIS-1a M7a D5a D2a	DO, Turbidity and Suspended Solids	Limit Level	During water quality monitoring conducted on 21 May 2024, it was observed that the water in the throughout the channel affected by rainfall, including control station, gradient station and impact station.  There were no major construction works conducted near M1a, M2a, M3, EIS-1a, M7a & D5a, and pre-drilling works, concrete breaking and earth works conducted at Shan Ha Road Nullah which located at upstream of D2a. Weekly site inspection was carried out by ET and it was observed that water streams within works area were well maintained, with wastewater collected and treated by wastewater treatment facilities before discharge.  According to the weather information from the Hong Kong Observatory, there were rainy day on 21 May 2024 with rainfall at 45.3mm. This rainfall likely led to runoff from the surrounding environment, resulting in a	Since the exceedances were non-project related, increase monitoring frequency according to the requirement of Event and Action Plan is not required, and corrective action is not required.
