## EXECUTIVE SUMMARY

This monthly EM&A report No.4 has been prepared by the Environmental Team (ET) of ETS-Testconsult Ltd for impact monitoring under the Environmental Permit No. EP-150/2002/A (the EP) for " Construction of Jetty at Lung Kwu Chau (CED Contract No.: CV/2002/11) " (The Project) during the reporting period from 09 September to 08 October 2003.

### Construction Progress

The major construction works in this reporting month included the backfilling of the jetty and the catwalk, concreting of the pier's coping, dredging of the approach channel, excavation of the footpath's foundation and the setting of precast concrete footings of the footpath.

### Environmental Monitoring Progress

The monitoring activities in this monitoring month are summarized below:

- Marine water monitoring: 2 Occasions;
- Site inspection: 2 Occasions.

### Marine Water Monitoring

No exceedances of Action and Limit Level of all monitoring parameters were recorded in this reporting month.

### Site Inspection

Environmental audits and inspections conducted in this reporting month are summarized as follows:

<u>Concerned Parties</u>	<u>Dates of Audit / Inspection</u>
CED / WKC&T / ET	19/09, 26/09

The Contractor was recommended to maintain good environmental management in order to minimize environmental impacts at the site.

### Environmental Complaints and Notification of Summons and Successful Prosecutions

No environmental complaints were received and no notification of summons and prosecutions with respect to environmental issues were registered in this reporting month.

### Future Key Issues and Recommendations to the Contractor

The Contractor is recommended to minimize the environmental impacts through maintenance of good site practice and implementation of the required waste management.

## 1.0 INTRODUCTION

Wai Kee (Zens) Construction & Transportation Co., Ltd. (WKC&T) has been awarded the Contract No.: CV/2002/11, "Construction of Jetty at Lung Kwu Chau" (the Project) by the CED. ETS-Testconsult Limited (ETL) has been commissioned as Environmental Team (ET) to carry out impact marine water quality monitoring at Lung Kwu Chau.

Under the requirements of Section 4 of Environmental Permit to Construct and Operate a Designate Project (EP-150/2002/A), EM&A programme as set out in the EM&A Manual is required to be implemented. In accordance with the EM&A manual, environmental monitoring of water quality, ecology and waste management is required for the Project.

The EM&A requirement is described in details in subsequent sections, including:

- Monitoring parameters;
- Action and Limit levels for all environmental parameters;
- Event-Action Plans;
- Environmental mitigation measures, as recommended in the project EIA study report;
- Environmental requirements in contract documents.

This monthly EM&A report summarizes the impact monitoring results and audit findings of the EM&A program during the reporting period from 09 September to 08 October 2003.

## 2.0 PROJECT INFORMATION

### 2.1 Background

To provide essential navigational aid for aircraft operating into and out of Hong Kong International Airport, a Doppler VHF Omni-directional Range and Distance Measuring Equipment (DVOR/DME) Station is being operated on Lung Kwu Chau. The existing jetty at Lung Kwu Chau is too small and the surrounding waters are too shallow to accommodate the vessels employed by Civil Aviation Department (CAD) for transporting equipment and personnel for servicing and maintaining the DVOR/DME. At present, the transportation relies heavily on helicopters, the operation of which is prohibited during night times and adverse weather conditions. In order that emergency repair work can be undertaken during such periods, CED has proposed to construct a proper jetty for berthing of marine vessels.

### 2.2 Project Location and Scope

The proposed site of the Project is located on the eastern coast of Lung Kwu Chau as shown in Figure 1. Lung Kwu Chau is situated within the gazetted Sha Chau and Lung Kwu Chau Marine Park. Due to the remoteness of the site, the island is uninhabited with no infrastructure other than the existing jetty and the DVOR/DME Station. Under the preliminary design, the scope of this Project comprises the following:

- Construction of a precast concrete blockwork jetty (10 m by 20 m) with a single berth;
- Construction of a concrete catwalk (approximately 22 m long);
- Dredging of an approach channel to a level of -2.5 mCD in front of the berth;
- Installation of miscellaneous facilities on the jetty, including lighting, navigation light, fendering, handrails, bollards, tide gauge, etc;
- Demolition of the existing jetty upon completion of the proposed jetty;
- Extension of an existing footpath.

### 2.3 Construction Programme

The Project is scheduled to commence in April 2003 for completion in December 2003. The Construction Programme is attached in Appendix E.

## 2.4 Project Organization and Management Structure

The organization chart with respect to the on-site environmental management and monitoring program are shown in Appendix A.

## 2.5 Contact Details of Key Personnel

The key personnel contact names and telephone numbers, and construction programme are shown in table 2.1.

Table 2.1 Contact Details of Key Personnel

Organization	Project Role	Name of Key Staff	Tel. No.	Fax No.
CED	Employer	Mr. T. S. Tsui	2762 5571	2714 2054
AUES	Independent Environmental Checker	Mr. Cliff Lam	2959 6059	2959 6079
WKC&T	Contractor	Mr. W. T. Ho	2548 3529	2548 5248
ETL	Contractor's Environmental Team	Mr C L Lau (Environmental Team Leader)	2946 7791	2695 3944

## 3.0 CONSTRUCTION PROGRESS IN THIS REPORTING MONTH

The site area of this project is shown in Figure 1.

A summary of the major construction activities undertaken in this monitoring month were:

- Backfilling of the jetty and the catwalk;
- Concreting of the pier's coping;
- Dredging of the approach channel;
- Excavation of the footpath's foundation;
- Setting of precast concrete footings of the footpath.

The above construction activities are defined as "General Construction Activities".

The implementation of the corresponding mitigation measures is summarized in Table 3.1.

Table 3.1 Implementation of Environmental Mitigation Measures

Construction Activities	Environmental Mitigation Measures
General construction works	<ul style="list-style-type: none"><li>• Remove the rubbish accumulated in the site regularly;</li><li>• Provide good site practice (e.g. selection of quieter plant and working methods and reduction in number of plant operating in critical areas close to Dolphins' habitats) to limit noise emissions at source;</li><li>• Keep good waste management.</li></ul>

## 4.0 MARINE WATER QUALITY MONITORING

### 4.1 Monitoring Locations

The marine water quality monitoring stations during the dredging works for the jetty and catwalk foundation and approach channel are shown in TS-2031. The co-ordinates of the marine water monitoring stations are listed in Table 4.1.

Table 4.1 Marine Water Quality Monitoring Stations

Station	Easting	Northing
M1	806244	827080
M2	806329	826408
M3	806235	826089
C1	806116	827618
C2	806034	825308

Control station C1 should be the upstream control station for all monitoring stations during mid-ebb and Control Station C2 should be the upstream control station for all monitoring stations during mid-flood.

### 4.2 Monitoring Parameters

Monitoring parameters listed in Table 4.2 shall be measured by the ET to ensure that any deteriorating water quality could be readily detected and timely action be taken to rectify the situation. Table 4.3 shows the other relevant water quality parameters to be recorded during the impact monitoring.

Table 4.2 Monitoring Parameters

In-situ measurement	Laboratory analysis
Dissolved Oxygen (mg/L)	Suspended solids (mg/L)
Turbidity (NTU)	

Table 4.3 Other relevant water quality parameters

Water Quality Parameters	
Tidal stages	Ambient Temperature (°C)
Water depth (m)	Marine Water Temperature (°C)
Monitoring time (hr:mm)	Dissolved Oxygen saturation (%)
Weather Condition	Salinity (ppt)

Note: pH is agreed by ET Leader, the Engineer and IE to be irrelevant to the Project.

### 4.3 Monitoring Frequency

The impact monitoring frequency of marine water quality during the dredging works for the jetty and catwalk foundation and approach channel is summarized in Table 4.4.

Table 4.4 Monitoring frequency of Impact Monitoring

Frequency	Monitoring Depth
3 days/week, 2 tides/day	Surface, middle and bottom

#### 4.4 Monitoring Methodology and Equipment Used

##### Positioning of the monitoring stations

A hand-held digital Global Positioning System (GPS) was used to identify the designated monitoring stations prior to water sampling.

##### Water Depth measurement

A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

##### In-situ Water Quality Monitoring Equipment

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use, and subsequently re-calibrated at 3 monthly intervals or sometimes longer throughout all stages of the water quality monitoring.

##### Dissolved Oxygen (DO) and temperature measuring equipment

Portable, weatherproof DO-measuring meter with built-in salinity compensation (YSI model 95) was used in the impact monitoring. It can be capable for measuring:

- a dissolved oxygen level in the range of 0-20 mg/L and 0-200 % saturation; and
- a temperature of 0-45 degree Celsius

This type of DO-measuring meter has a membrane electrode with automatic temperature compensation complete with a 50-feet cable. Wet bulb calibration for a DO meter was carried out before measurement at each monitoring location

##### Turbidity Measurement Instrument

Portable and weatherproof turbidity meter (HACH model 2100P) was used during impact monitoring. It has a photoelectric sensor capable of measuring turbidity between 0-1000 NTU. Response of the sensor was checked with certified standard Turbidity solutions before the start of measurement.

##### Salinity

A portable salinity meter capable of measuring salinity in the range 0-40 ppt (YSI Model 30M) was provided for measuring salinity of the water at each monitoring location. It was checked with standard 30 ppt Salinity solutions before the start of measurement.

##### Water Sampling and Sample Analysis

In-situ monitoring was carried out at three depths: 1 meter below water surface, at mid-depth and 1 meter above the seabed. If the water depth is less than 6 m, the mid-depth station shall be omitted and if the water depth is below 3 m, only the mid depth station shall be monitored.

A water sampler comprising a transparent PVC cylinder, with a capacity of not less than 2 litres, was lowered into the water body at the predetermined depth. The opening ends of the sampler were then closed accordingly and water samples were collected.

The sample container, made by high-density polythene, was rinsed with a portion of the water sample. The water sample was then transferred to the container, labelled with a unique sample ID and sealed with a screw cap. The water samples were stored in a cool box maintained at 4°C. The water samples were then delivered to a local HOKLAS-accredited laboratory (Environmental Laboratory, ETS-Testconsult Ltd, HOKLAS Registration No. 022) on the same day for analysis.

#### 4.5 Quality Assurance (QA) / Quality Control (QC) results and Determination Limits

At each measurement/sampling depth, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. For turbidity measurement, the sample was collected by using sampler and then transferred to the cell. The reading of turbidity of the sample was directly recorded from the Turbidimeter (HACH 2100P) after inserting the cell to the Turbidimeter. For DO, DOS and Salinity, duplicate measurements were performed by dropping the calibrated probes of the corresponding monitoring equipments to the designated depths of the water column and taking readings after stabilized. The duplicate measurements were averaged if the difference was not greater than 25%.

The summary of laboratory testing method of Total Suspended Solids analysis was shown in Table 4.5.

Table 4.5 The summary of laboratory testing method of Total Suspended Solids

Laboratory Analysis	Testing Procedure	Method Detection Limit
Total suspended solids	In house method based on APHA 19 <sup>th</sup> ed 2540D	1.0 mg/L

Environmental Laboratory of ETS-Testconsult Ltd has quality assurance and quality control programs in accordance with HOKLAS requirement. For the QA/QC procedures, one QC sample, one duplicate sample and one sample spike of every batch of 20 samples were analysed. The QA/QC results are summarized in Appendix G.

#### 4.6 Details of site Equipment used for In-situ measurement

Table 4.6 shows the equipment used for in-situ monitoring of water quality. The calibration certificates are attached in Appendix B1.

Table 4.6 Details Impact Monitoring Equipment (In-site measurement)

Parameter	Model	Date of Calibration / Performance Check	Due Date	Equipment No.
Coordinate of Monitoring stations	MLR GPS Navigator, SP24	-----	-----	EW/005/01*
Dissolved Oxygen (Saturation), Temperature	YSI Dissolved Oxygen Meter, YSI 95	30-06-2003	29-09-2003	EW/003/002 *
Turbidity	HACH Model 2100P Turbid Meter	23-08-2003	22-11-2003	ET/0505/004 #
Salinity	YSI Model 30M	18-09-2003	18-12-2003	EW/004/01#
Water Depth	EAGLE Strata 128 Sonar	-----	-----	EW/002/02

Remark: (\*) indicates the instrument should be calibrated on use.

(#) indicates the instrument should be checked with standard solution before use.

#### 4.7 Action and Limit Level

The water quality criteria, namely Action and Limit (A/L) levels, determined according to the baseline study carried out by ET are presented in the table below.

Table 4.7 Water Quality Action and Limit Levels

Parameter	Action Level	Limit Level
Dissolved Oxygen (DO), mg/L	<u>Surface &amp; Middle</u> 4 mg/L  <u>Bottom</u> 2.86 mg/L	<u>Surface &amp; Middle</u> 4 mg/L  <u>Bottom</u> 2 mg/L
Suspended Solids (SS), mg/L (Depth-averaged)	44 mg/L or 120% of the upstream control station's SS at the same tide on the same day	49 mg/L or 130% of the upstream control station's SS at the same tide on the same day
Turbidity, NTU (Depth-averaged)	37.4 NTU or 120% of the upstream control station's turbidity at the same tide on the same day	46.2 NTU or 130% of the upstream control station's turbidity at the same tide on the same day

#### 4.8 Event-Action Plans

Event-Action Plans are presented in Appendix F.

#### 4.9 Monitoring Duration and Period

In-situ measurement was carried out at both mid-flood and mid-ebb at each location on a sampling day. Table 4.8 shows the schedule for impact water quality monitoring at Lung Kwu Chau.

Table 4.8 – Time Schedule of Water Quality Monitoring at Lung Kwu Chau

09 September and 08 October 2003						
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
		9 Sept	10	11	12	13
14	15	16	17	18	19	20

C2	Action	0	0	0	0	0	0
	Limit	0	0	0	0	0	0
Total	Action	0	0	0	0	0	0
	Limit	0	0	0	0	0	0

Table 4.10 Daily Exceedance summary of marine water quality

09 June to 08 July 2003

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
		9 Sept	10	11	12	13
14	15	16	17	18	19	20
21	22 No exceedances in all WMP <sup>*</sup>	23	24 No exceedances in all WMP <sup>*</sup>	25	26	27
28	29	30	1 Oct	2	3	4
5	6	7	8			

Figures in Bold denote marine water monitoring taken place

(^) indicates WMP = Water Monitoring Parameters

(\*) indicates AL = Action Level and (#) indicates LL = Limit Level

According to the summary of marine water monitoring results, no exceedances of Action and Limit Level were recorded in this reporting month.

## 5.0 ECOLOGY MONITORING

### 5.1 Introduction

According to the EM&A manual, there will be small loss of backshore vegetation and grass/shrubland due to the construction of footpath to the catwalk. At the same time, the construction works also cause impact on the marine dolphin habitat near the north and east coast of Lung Kwu Chau.

In order to minimize the impact to an acceptable level, the implementation schedule of the recommended ecological mitigation measures is developed and stated at the Appendix A of EM&A manual.

Implementation of these recommended mitigation measures will be monitored and audited during the construction stage.

### 5.2 Monitoring Procedure

During the weekly site inspection, ET monitored and audited the implementation of the recommended mitigation measures for terrestrial ecology and marine ecology following the site inspection checklist.

### 5.3 Monitoring Frequency and Schedule

Weekly site inspection for terrestrial ecology and marine ecology was carried by ET during the construction period. Four site inspections were undertaken in this reporting month.

### 5.4 Result and Observation

A summary of the implementation status of the mitigation measures for terrestrial ecology and marine ecology on site inspections is presented in Appendix C.

No disturbance to the terrestrial habitat and dolphin habitat due to construction work was observed in this reporting month.

## 6.0 ENVIRONMENTAL NON-CONFORMANCE

### 6.1 Summary of Exceedance of Action and Limit Level

No exceedances of Action and Limit Level of marine water monitoring results were recorded during the reporting month since no impact monitoring on water quality was carried out.

### 6.2 Summary of Environmental Complaints

No environmental complaints were received in this monitoring month.

### 6.3 Summary of Notification of Summons and Prosecution

There were no notification of summons respect to environmental issues registered in this month.

## 7.0 WASTE MANAGEMENT

### 7.1 Waste Management Audit

Waste management audit was carried out by the ET. A summary of the implementation status of the mitigation measures on waste management is presented in Appendix C.

### 7.2 Records of Waste Quantities

All types of wastes arising from the construction work are classified into the following:

- General refuse;
- Chemical waste;
- Construction & demolition (C&D) material.

The quantities of waste for disposal in this month are summarized in Table 7.1.

Table 7.1 Summary of Quantities of Waste for Disposal in this reporting month

Type of Waste	Quantity	Disposal Location
Dredged Materials (Contaminated) (m <sup>3</sup> )	0	Nil
Dredged Materials (Uncontaminated) (m <sup>3</sup> )	1000	East Sha Chau : Mud Pit lvb
C&D Material (Inert) (m <sup>3</sup> )	0	Nil
C&D material (Non-inert) (m <sup>3</sup> )	2	Public Refuse Collection Point
General Refuse (m <sup>3</sup> )	4	Public Refuse Collection Point
Chemical Waste (m <sup>3</sup> )	0	Nil

### 7.3 Summary of dredging volume in this reporting month

The summary of daily dredging volume in this reporting month is summarized in Table 7.2.

Table 7.2 Summary of Daily Dredging Volume in this reporting month

Date	Dredging Volume (m <sup>3</sup> )	Disposal Volume (m <sup>3</sup> )
22/09/2003	500	0
23/09/2003	0	500
24/09/2003	500	500
Total Volume	1000	1000

## 8.0 ENVIRONMENTAL AUDIT

### 8.1 Site Inspection

Site inspections were carried out by the ET at 19 and 26 September 2003. A summary of the implementation status of the mitigation measures on site inspections is presented in Appendix H.

### 8.2 Status of Environmental Licensing and Permitting

All permits/licenses obtained in this reporting month are summarized in Table 8.1.

Table 8.1 Summary of environmental licensing and permit status

Description	Permit No.	Valid Period		Section
		From	To	
Environmental Permit	EP-150/2002/A	29/04/03	---	Whole work site
Marine Dumping Permit	EP/MD/04-005	15/05/03	14/11/03	• Hopper barge and Motor tug
Construction Noise Permit	GW-TW0136-03	01/05/03	31/10/03	• One Derrick Barge (CNP 061) • One Tug boat (CNP 221)

### 8.3 Implementation Status of Environmental Mitigation Measures

WKC&T has been implementing the required environmental mitigation measures according to Implementation of Mitigation Measures stated in the Appendix A of EM&A manual. A summary of the implementation status of the mitigation measures is presented in Appendix H. The following observations were made during site inspection:

#### Water Quality

- Daily dredging rate was kept below 500m<sup>3</sup>/day during the dredging period;
- Use of a closed grab dredger was observed during dredging works. The grab was sealed tightly while being lifter and therefore no spillage was observed;
- Silt curtain was used to enclose the grab while dredging works are in progress. Silt curtain used were well maintained and no leakage of suspended matters were observed;
- All vessels were kept tidy and no oil or other substances were washed overboard;
- No litter and loose objects, e.g. tools, were left lying around.

#### Terrestrial Ecology and Marine Ecology

- No damage of surrounding natural habitats was observed;
- No open fires were observed within the work site boundary;
- No disturbance to the dolphin habitat was observed.

#### Waste Management

WKC&T has been implementing most mitigation measures on waste management. The Contractor was reminded to provide more manpower to maintain good wash management, such as recycling of waste before disposal.

#### **8.4 Recommendations on site inspection findings**

Based on the site inspection findings, the recommendations are as below:

- Use quiet or 'silenced' plant equipment;
- Avoid the use of high-speed vessels where possible, or slow the high-speed vessels to under 10 knots which is the speed restriction for all marine traffic inside the Marine Park Boundary;
- Check the work site boundaries regularly to ensure that no damage occurs to surrounding natural habitats;
- Construction activities shall not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site;
- Maintain good site practices and waste management at the site;

#### **8.5 Implementation Status of Event and Action Plan**

Since no exceedances of Action and Limit Level were recorded in this reporting month, no further mitigation measures were required.

#### **8.6 Implementation Status of Environmental Complaint Handling**

No written or verbal complaints had been received during this monitoring month.

#### **8.7 Implementation of Notification of Summons and Prosecution**

There was no notification of summons respect to environmental issues registered in this reporting month. No prosecutions related to environmental issues were received.

### **9.0 CONCLUSION**

Impact monitoring of marine water quality was carried out at designated locations in accordance with the EM&A Manual in this reporting month.

No exceedances of Action and Limit level were recorded in this reporting month.

According to the ET weekly site inspections and IE monthly site audit carried out this month, it indicated that site practices of the WKC&T were generally undertaken in an environmentally acceptable manner and the overall site environmental performance was satisfactory.

### **10.0 FUTURE KEY ISSUES**

#### **10.1 Upcoming EM&A Schedule**

Dredging for approach channel were completed in the end of September 2003. Therefore, no marine water quality monitoring will be required in the coming months. Hence, only weekly site inspection should be carried out in the coming months.

#### **10.2 Upcoming construction works schedule in the coming two months**

The major construction works planned to be carried out in next month and their possible impact is tabulated (Table 10.1) for reference.

Table 10.1 – Construction Plan in the coming two month

Construction Work	Activities (proposed)
Jetty Construction	<ul style="list-style-type: none"><li>• Concreting at staircase;</li><li>• Laying GI ducting and drawpit;</li><li>• Filling sub-base materials;</li><li>• Installing fender;</li><li>• Setting precast unit at paving;</li><li>• Installing pollard light;</li><li>• Concreting at paving;</li><li>• Installing handrailing and furniture.</li></ul>
Catwalk Construction	<ul style="list-style-type: none"><li>• Placing armour rock;</li><li>• Laying GI ducting and drawpit;</li><li>• Constructing pillar box;</li><li>• Filling sub-base materials;</li><li>• Setting precast unit at paving;</li><li>• Installing bollard light;</li><li>• Concreting at paving;</li><li>• Installing handrailing.</li></ul>
Footpath Construction	<ul style="list-style-type: none"><li>• Carrying out foundation excavation and blinding construction;</li><li>• Constructing of footing and slab installation;</li><li>• Concreting at slab;</li><li>• Constructing buttress to over-hang boulder;</li><li>• Lying E&amp;M ducting (VO4);</li><li>• Installing handrailing</li></ul>
Existing Pier	<ul style="list-style-type: none"><li>• Demolishing existing pier.</li></ul>

### Calibration Certificates for Impact Monitoring Equipments

## Internal Calibration Report of Turbidimeter

Equipment Ref. No. : ET/0505/004 Manufacturer : HACH

Model No. : 2100P Serial No. : 951100009130

Date of Calibration : 23 August 2003 Calibration Due : 22 Nov. 2003

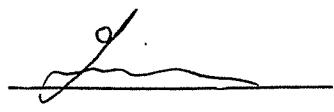

### Data

4.95	54.8	850
0 - 10 NTU Gelex Vial	10 - 100 NTU Gelex Vial	100 - 1000 NTU Gelex Vial
4.96	53.9	841

The equipment complies \* / does not comply \* with the specified requirements and is deemed acceptable \* / unacceptable \* for use.

\* Delete as appropriate

Calibrated by : Linda Lam

Approved by : 

## Performance Check of Salinity Meter

Equipment Ref. No. : EW 1004101 Manufacturer : YSIModel No. : 30 M Serial No. : 97 30300 AADate of Calibration : 18 Sept 2003 Due Date : 18 Dec. 2003

Ref. No. of Salinity Standard used (30ppt)

J137

Salinity Standard (ppt)	Measured Salinity (ppt)	Difference %
30	30.5	1.67

## Acceptance Criteria

Difference : &lt;10 %

The salinity meter complies \* / ~~does not comply~~ \* with the specified requirements and is deemed acceptable \* / ~~unacceptable~~ \* for use. Measurements are traceable to national standards.

Checked by : TekApproved by : Linda Law

## Internal Calibration Report of Dissolved Oxygen Meter

Equipment Ref. No.	<u>EW/003/002</u>	Manufacturer	<u>YSI</u>
Model No.	<u>95</u>	Serial No.	<u>9730182 AD</u>
Date of Calibration	<u>30 June 2003</u>	Calibration Due Date	<u>29 Sept 2003</u>

Ref. No. of Reference Thermometer : ET/2403/01

Ref. No. of Potassium Dichromate : ET/0520/003/02

### Temperature Verification

		Temperature (°C)
Thermometer reading		20.0
Meter reading		20.0

### Linearity Checking

Purging time, min	DO meter reading, mg/L			Winkler Titration result, mg/L		
	1	2	Average	1	2	Average
2	7.04	7.07	7.06	7.01	7.04	7.03
5	5.20	5.17	5.19	5.21	5.18	5.20
10	2.53	2.56	2.55	2.47	2.46	2.47
Linear regression coefficient	0.9998					

### Zero Point Checking

DO meter reading, mg/L	0.00

### Salinity Checking

Salinity (ppt)	DO meter reading, mg/L			Winkler Titration result, mg/L		
	1	2	Average	1	2	Average
10	7.10	7.08	7.09	7.06	7.03	7.05
30	6.89	6.87	6.88	6.88	6.91	6.90

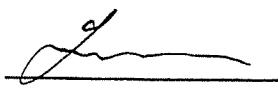

### Acceptance Criteria

- (1) Difference between temperature readings from temperature sensor of DO probe and reference thermometer : < 0.5 °C
- (2) Linear regression coefficient : < 0.99
- (3) Zero checking: 0.0mg/L
- (4) Difference (%) of DO content from the meter reading and by winkler titration : ± 5%

The equipment complies \* / does not comply \* with the specified requirements and is deemed acceptable \*  
/ unacceptable \* for use.

\* Delete as appropriate

Calibrated by : Linda Lam

## Appendix H

### **Summary of the Implementation Status of Mitigation Measures**

## SUMMARY OF IMPLEMENTATION STATE OF THE MITIGATION MEASURES

Environmental Protection Measures / Mitigation Measures	Implementation Stages*			Remark
	Yes	No	N/A	
<b>Measures to be implemented during dredging:</b>				
• Use of a closed grab dredger with a maximum daily production rate of 500 m <sup>3</sup> /day;	✓			
• Deployment of silt curtain to enclose the grab while dredging works are in progress. The silt curtain shall be frame type and designed to enclose local pollution caused by the grab dredging.	✓			
• The second layer of silt curtain shall be formed from tough, abrasion-resistant permeable membranes, supported on floated booms in such a way as to ensure that egress of turbid waters from the enclosed dredging area shall be restricted.	✓			
• Use of small sized hopper barge and dredger for dredging works. The maximum draft of the dredger and hopper barge, when fully loaded, shall not exceed 2m. The hopper barge shall make more frequent trips to transport the dredged material to the allocated marine disposal ground, instead of remaining at Lung Kwu Chau until it is fully loaded, in order to avoid grounding of the barge during low tide.	✓			
• Mechanical grabs shall be designed and maintained to avoid spillage and sealed tightly while being lifted.	✓			
• All pipe leakages shall be repaired promptly and plant shall not be operated with leaking pipes.		✓		
• The decks of all vessels shall be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard..		✓		
• Adequate freeboard (i.e. minimum of 200mm) shall be maintained on barges to ensure that decks are not washed by wave action.	✓			
• All hopper barges and dredgers shall be fitted with tight fitting seals to their bottom openings to prevent leakage of material.	✓			
• Construction activities shall not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site or dumping grounds.	✓			
• Loading of barges and hopper barges shall be controlled to prevent splashing of material into the surrounding water. Barges or hopper barges shall not be filled to a level that will cause the overflow of materials or sediment laden water during loading or transportation.	✓			

## SUMMARY OF IMPLEMENTATION STATE OF THE MITIGATION MEASURES

Environmental Protection Measures / Mitigation Measures	Implementation Stages*			Remark
	Yes	No	N/A	
<b>Measure to be implemented during Demolition and removal works</b>				
<ul style="list-style-type: none"> <li>Demolition and removal works of the submerged portion of the existing jetty shall be carried out around low tide to minimize the duration of works taking place within the marine waters.</li> </ul>		✓		
<b>Mitigation for terrestrial ecology</b>				
<ul style="list-style-type: none"> <li>Check the work site boundaries regularly to ensure that no damage occurs to surrounding natural habitats.</li> <li>Prohibit and prevent open fires within the work site boundary during construction and provide temporary fire fighting equipment in the work areas.</li> <li>Reinstate temporary work sites/disturbed areas immediately after completion of the construction.</li> </ul>	✓	✓	✓	
<b>General mitigation for Chinese White Dolphin</b>				
<ul style="list-style-type: none"> <li>The use of high-speed vessels in the construction or operation of the jetty shall be avoided where possible. If high-speed vessels must be used, they shall be required to slow to under 10 knots which is the speed restriction for all marine traffic inside the Marine Park Boundary. Furthermore, marine traffic entering the Marine Park to the proposed jetty area shall follow a regular and predictable route.</li> <li>All vessel operators working on the project shall be given a briefing, alerting them to the conservation significance of the Marine Park and the presence of dolphins in the area, and setting out guidelines for safe vessel operations around cetaceans.</li> <li>A policy of no dumping of rubbish, food, oil, or chemicals shall be strictly enforced. This shall also be covered in the contractor briefing.</li> <li>Before dredging, an exclusion zone of 500m radius shall be scanned around work area for at least 30 minutes prior to the start of dredging. If dolphins are observed in the exclusion zone, marine works shall be delayed until they have left the area. Furthermore, if dolphins enter the exclusion zone after dredging has commenced, marine works shall cease until they have left the area.</li> <li>Staff shall monitor for the presence of dolphins within the exclusion zone by scanning the sea both with and without binoculars whilst positioned at vantage point near the summit of the hill behind the jetty location. The vantage point shall enable an extensive view of the 500m exclusion zone in all directions around the jetty. Staff shall communicate with the Engineer via a dedicated telecommunications device (e.g. mobile phone or walkie-talkie).</li> </ul>	✓	✓	✓	

## SUMMARY OF IMPLEMENTATION STATE OF THE MITIGATION MEASURES

Environmental Protection Measures/Mitigation Measures	Implementation Stages*			Remark
	Yes	No	N/A	
<b><i>Mitigation for minimising possible noise impacts on dolphins</i></b>				
• Other measures recommended to mitigate noise impact on dolphins by allowing their acclimatization to noise disturbance are to, as far as practicable:				
- The number of work vessels and small craft shall be minimised during the construction phase.				
- Dredging and jetty construction activities shall be continuous without short breaks or unpredictable noise outbursts at random intervals.	✓			
- Events shall be scheduled on a regular basis with similar activities planned for similar time period each day.	✓			
- Furthermore, the Contractor shall use quiet or 'silenced' plant equipment. All site plant equipment shall be well maintained.	✓			
• Removal of the existing jetty structure shall be done in a way that minimise noise impact on dolphins by following the above recommended measures. Blasting shall not be permitted. Silenced breakers shall be used and demolition and removal works of the submerged portion of the jetty shall be carried out around low tide to minimise transmittance of noise into the water. In addition, demolition of the jetty structure shall be planned so that, as far as practicable, the structure is 'cut' into large manageable sections to minimise the amount of time breakers are used.			✓	
• During the operational phase, vessels moored at the jetty for extended periods shall, as far as practicable, turn off their engines to minimise unnecessary underwater noise.			✓	
<b><i>Marine Sediment</i></b>				
• The material must be dredged, transported and disposed of in a manner which minimizes the loss of contaminants either into solution or by resuspension. During transportation and disposal of the dredged marine sediments, the following measures shall be taken to minimise potential impacts on water quality.	✓			
• Bottom opening of barges shall be fitted with tight fitting seals to prevent leakage of material. Excess material shall be cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved.	✓			
• Monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the Director of Environmental Protection.	✓			

## SUMMARY OF IMPLEMENTATION STATE OF THE MITIGATION MEASURES

Environmental Protection Measures/Mitigation Measures	Implementation Stages*			Remark	
	Yes	No	N/A		
<b>Good Site Practices and Waste Reduction Measures</b>					
<b>Good site practices during the construction activities include:</b>					
<ul style="list-style-type: none"> <li>• Nomination of an approved personnel, such as a site agent, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.</li> <li>• Training of site personnel in proper waste management procedures.</li> <li>• High standards of waste management shall be observed on the works vessels and barges to ensure that no waste arisings or fuel/diesel oils are disposed to the surrounding marine waters.</li> <li>• No C&amp;D materials and machinery fuels enter the marine waters at the site;</li> <li>• No stockpiles of construction material shall be permitted on Lung Kwu Chau Island.</li> <li>• All wastes, unused construction materials and construction equipment shall be removed from Lung Kwu Chau Island after the works are completed.</li> <li>• A recording system for the amount of wastes generated, recycled and disposed of (including the disposal sites).</li> <li>• In order to monitor the disposal of C&amp;D materials at public filling areas, and to control fly-tipping, a trip-ticket system shall be included as one of the contractual requirements.</li> </ul>	√			√	
<b>Waste reduction</b>					
Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:					
<ul style="list-style-type: none"> <li>• Prior to disposal of C&amp;D waste, it is recommended that wood, steel and other metals shall be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill.</li> <li>• Proper storage and site practices to minimise the potential for damage or contamination of construction materials.</li> <li>• Plan use of construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.</li> </ul>	√	√		√
