Ocean Park Tai Shue Wan Water World Project

Biannual EM&A Report
(June to November 2024)

December 2024

This Biannual EM&A Report for June to November 2024 has been reviewed and certified by the Environmental Team Leader (ETL) and verified by the Independent Environmental Checker (IEC) as having complied with the requirements as set out in the approved Updated Woodland Compensation Plan in accordance with Condition 2.7 of Environmental Permit No. EP-487/2014/A.

Executive summary

Mott MacDonald Hong Kong Ltd. (“MMHK”) has been commissioned by the Ocean Park Corporation, to undertake the Environmental Team (ET) services to carry out environmental monitoring and audit (EM&A) for the operation phase of Ocean Park Tai Shue Wan Water World (the Project). The EM&A includes a 3-year monitoring post-planting programme of the woodland compensation area (WCA).

This is the 3rd Biannual EM&A Report for the operation phase of the Project summarising the findings of WCA post-planting monitoring from 1 June 2024 to 30 November 2024, and is submitted under the Environmental Permit (No. EP-487/2014/A).

Environmental Monitoring and Audit Progress

WCA post-planting monitoring activities were conducted quarterly during the reporting period on 3 July 2024 and 2 October 2024.

Exceedance of Trigger/Action Levels

During the reporting period, there was no exceedance of the Trigger and Action Levels for monitoring of the WCA.

1 Introduction

1.1 Background

On 27 August 2014, the Environment Impact Assessment (EIA) Report and Environmental Monitoring and Audit (EM&A) Manual (Register No.: AEIAR-184/2014) for the “Tai Shue Wan Development at Ocean Park” (the Project) was approved and an Environmental Permit (EP) (Permit No.: EP-487/2014) was issued to the Ocean Park Corporation. Based on the Application for Variation of Environmental Permit No. VEP-539/2017, the current valid EP (Permit No.: EP-487/2014/A) was issued on 10 January 2018. The location and layout of the Project are presented in **Appendix A**.

Upon the completion of construction of the Project in May 2021 and the approved termination of construction phase EM&A programme in July 2021, the Water World opened on 21 September 2021. Mott MacDonald Hong Kong Ltd. (“MMHK”) has been commissioned by the Ocean Park Corporation to undertake the Environmental Team (ET) services to carry out operation phase EM&A for the Ocean Park Tai Shue Wan Water World Project.

In Section 10.7.3.2 of the approved EIA report, approximately 1.62 ha of woodland compensation is recommended as a mitigation measure for the loss of approximately 1.53 ha of woodland during construction phase of the Project. In accordance with Condition 2.7 of the EP, a Woodland Compensation Plan (WCP) was submitted to EPD and approved in October 2014, with later two revisions of Updated WCP submitted and approved in July 2022 and May 2023.

1.2 Project Organisation

The project organisation and the contacts of key personnel of the Project are shown in **Appendix B**.

1.3 Environmental Status and Programme

The planting works at WCA were carried out from November 2022 to February 2023. Upon the establishment of the WCA, the 3-year post-planting monitoring and maintenance programme for the WCA was commenced in June 2023 in accordance with the latest Updated WCP. This is the 3rd Biannual EM&A Report summarising the WCA monitoring results for the Project during the reporting period from 1 June 2024 to 30 November 2024.

2 Monitoring of Woodland Compensation Area

2.1 Monitoring Requirement

As required Section 8.3.2.5 of the approved EM&A Manual and the approved Updated WCP, the WCA should be monitored throughout the 3-year post-planting period to monitor the health condition and survival rate of the planted whip trees at the WCA. The location of the WCA is presented in **Appendix C**. The frequency of monitoring is bi-monthly during the first year and quarterly during the second and third years of the post-planting period.

The post-planting monitoring was conducted by ET and supervised by a qualified ecologist. The monitoring was carried out by means of inspection walk. Each monitoring event would cover no less than 20% of the WCA planting areas. The general health condition and survival rate of individual species of planted trees would be recorded by direct observation for the WCA. For steep and inaccessible area, the monitoring was conducted with aid of a pair of binoculars. The percentage of individuals in poor health and survival rate for each species of the inspected area would be quantified after each inspection walk, representing the overall health condition of the planted trees in the whole WCA.

The Trigger and Action Levels for the monitoring of WCA stipulated in the Updated WCP are presented in **Table 2.1**.

Table 2.1: Trigger and Action Levels for Monitoring of the WCA

Parameters	Trigger and Action Levels	Action Plan
General health condition	Trigger Level: % of individual plant species in poor health condition >20%	<ul style="list-style-type: none"> the ET should inform OPC / Contractor appointed by OPC and IEC immediately; identify the cause(s) of the increased % in poor condition; advise OPC / Contractor appointed by OPC the necessity of replanting; Should replanting be considered necessary, OPC / Contractor appointed by OPC should start the replanting works within one month or in the appropriate planting season.
	Action Level: % of individual plant species in poor health condition >30%	<ul style="list-style-type: none"> the ET should inform OPC / Contractor appointed by OPC and IEC immediately; identify the cause(s) of the increased % in poor condition; advise remedial action and work out solution including change of species in replanting; and seek acceptance from AFCD; Once the remedial action has been accepted by AFCD, OPC / Contractor appointed by OPC should start implementing the remedial action within two weeks or as agreed with AFCD.
Survival of plants	Trigger Level: Survival rate of individual plant species < 80%	<ul style="list-style-type: none"> the ET should inform OPC / Contractor appointed by OPC and IEC immediately; identify the cause(s) of the drop in survival rate; advise OPC / Contractor appointed by OPC the necessity of replanting; Should replanting be considered necessary, OPC / Contractor appointed by OPC should start the replanting works within one month or in the appropriate planting season.

Parameters	Trigger and Action Levels	Action Plan
	Action Level: Survival rate of individual plant species < 70%	<ul style="list-style-type: none"> • the ET should inform OPC / Contractor appointed by OPC and IEC immediately; • identify the cause(s) of the drop in survival rate; • advise remedial action and work out solution including change of species in replanting; and seek acceptance from AFCD; • Once the remedial action has been accepted by AFCD, OPC / Contractor appointed by OPC should start implementing the remedial action within two weeks or as agreed with AFCD.

2.2 Monitoring Findings

During the reporting period, inspection walks for WCA monitoring were conducted quarterly on 3 July 2024 and 2 October 2024. Around 50% of the WCA planting areas were covered during each monitoring event. The percentages of individuals in poor health and the survival rates of individual plant species are summarised in **Table 2.2**. There was no specific site observation and recommendations during the WCA monitoring. Representative photos of the plant species inspected are provided in **Appendix D**.

Table 2.2: Summary of WCA Monitoring Parameters

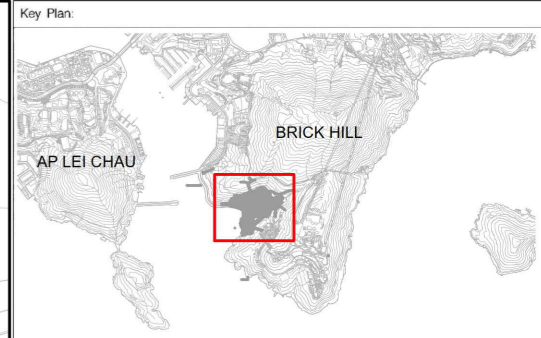

Inspection Month	July 2024		October 2024	
Species	% in poor health condition	Survival rate (%)	% in poor health condition	Survival rate (%)
Pioneer species				
<i>Acacia confusa</i>	0	100	0	100
<i>Ficus hispida</i>	0	100	0	100
<i>Pinus massoniana</i>	3.3	93.4	3.3	93.4
Sub-climax species				
<i>Brucea javanica</i>	0	100	0	100
<i>Cratoxylum cochinchinense</i>	0	100	0	100
<i>Ficus variegata</i>	0	100	0	100
<i>Macaranga tanarius var. tomentosa</i>	0	100	0	100
<i>Mallotus paniculatus</i>	0	100	0	100
<i>Polyspora axillaris</i>	0	100	0	100
<i>Rhus succedanea</i>	0	100	0	100
<i>Schefflera heptaphylla</i>	0	100	0	100
<i>Sterculia lanceolata</i>	0	100	0	100
Climax species				
<i>Celtis sinensis</i>	0	100	0	100
<i>Choerospondias axillaris</i>	0	100	0	100
Percentage of planting area inspected (%):	50		50	

During the reporting period, there was no exceedance of the Trigger and Action Levels. The health conditions of the planted tree species were generally observed to be fair to good.

3 Conclusions

Post-planting monitoring of WCA was conducted during the reporting period in accordance with the EM&A Manual and approved Updated WCP. During this reporting period, inspection walks were conducted quarterly on 3 July 2024 and 2 October 2024. The general health conditions of planted tree species were in fair to good conditions. There was no exceedance of the Trigger and Action Levels.
