EXECUTIVE SUMMARY

Introduction

Construction of Kwu Tung Station on East Rail Line [KTU(EAL)] (hereinafter referred to as "the Project") has commenced since February 2023.

Works Contract 1633 - Alteration and Addition Works at Kwu Tung for East Rail Line Protection Works" was awarded to Kum Shing (K.F.) Construction Company Limited to carry out the alteration and additional works to the existing railway facilities within the Project Site in order to facilitate the future construction of the Project. Wellab Limited was appointed by Kum Shing as the Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme for the Works Contract 1633 from 20 February 2023 to 31 October 2023 in view of the completion of alteration and additional works in October 2023.

Works Contract 1601 - Kwu Tung Station on East Rail Line was awarded to Dragages Hong Kong Limited in September 2023 to carry out the main civil works for the Project. Aurecon Hong Kong Limited was commissioned by Dragages Hong Kong Limited as the ET to provide EM&A services and take over the EM&A programme of the Project from 1 November 2023 to ensure that the environmental performance of the Works Contractor complies with the requirements specified in the Environmental Permit (EP no. FEP-06/129/2002/I), Environmental Review Report (ERR) and Updated EM&A Manual under this EP for the Kwu Tung Station on the East Rail Line and other relevant statutory requirements. The weekly environmental site inspections and environmental monitoring as scheduled under EM&A programme was conducted by Aurecon with effect from 1 November 2023.

This is the 11th Monthly Environmental Monitoring and Audit (EM&A) Report for the Works Contract 1601 - Kwu Tung Station on East Rail Line (hereinafter called the "Works Contract") under Environmental Permit No. FEP-06/129/2002/I. This report was prepared by Aurecon Hong Kong Ltd. (Aurecon) which summaries findings of the EM&A programme during the reporting period from 1 September 2024 to 30 September 2024.

Breaches of Action and Limit Levels

Air Quality

1. No Action Level and Limit Level exceedance was recorded for air quality monitoring in the reporting month.

Construction Noise

2. No Action Level and Limit Level exceedance was recorded for construction noise monitoring in the reporting month.

Environmental Non-Compliance

3. No environmental non-compliance was recorded in the reporting month.

Complaint log

4. No complaint was received in the reporting period.

Notification of Summons and Successful Prosecutions

5. No notifications of summons and successful prosecutions were received in the reporting period.

Reporting Changes

6. There were no reporting changes in the reporting month.

Future Key Issues

7. The main works will be anticipated in the next three months are as follow:

Upper Platform and Lower Platform (Above-ground):

- Piling and erection for tower crane (Above-ground Works)
- Construction of station structure (Above-ground Works)

Station Tunnel Box (Above-ground) and (Under-ground):

- Alteration and Additional, and E&M works inside the tunnel (Under-ground Works)
- Civil works provision for PSD installation (Under-ground Works)
- Advance work for tunnel box roof slab opening (Above-ground Works and Under-ground Works)
- Construction of station structure (Above-ground Works)

9. Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality, waste management and landscape and visual impact issues.

1 PROJECT INFORMATION

1.1 Background

- 1.1.1 The Environmental Impact Assessment (EIA) report for “Sheung Shui to Lok Ma Chau Spur Line” (Register No.: AEIAR-052/2002) (hereafter called the “approved EIA”) conducted by Kowloon-Canton Railway Corporation (KCRC) was approved in 2002, and addressed the environmental impacts caused by the LMC Spur Line. As far as the railway station at Kwu Tung is concerned, the approved EIA had considered the potential construction and operational impacts for the railway station at Kwu Tung enabling works including the station box structure.
- 1.1.2 In December 2020, the MTR Corporation Limited (i.e., MTRCL, hereafter called the Project Proponent) was invited by the Government to commence the detail planning and design of the railway station at Kwu Tung.
- 1.1.3 The construction and operation of the LMC Spur Line constitutes to Item A.2 Designated Project (DP) “A railway and its associated stations”, under Part I Schedule 2 of Environmental Impact Assessment Ordinance (EIAO). KCRC had applied for and had been granted numbers of Environmental Permits (EPs) and Further Environmental Permits (FEP) for its construction and operation of LMC Spur Line, including the existing tunnel box and enabling works.
- 1.1.4 In order to expand the scope of the FEP (No. FEP-06/129/2002/H) held by MTRCL to cover the construction and operation of the proposed Kwu Tung Station on the East Rail Line (hereinafter called “the Project”), variation of this FEP was required. The Environmental Review Report (ERR) had been prepared and submitted under the VEP application. The VEP application had been approved and a new Environmental Permit (No. FEP- 06/129/2002/I) was granted by EPD on 24 December 2021.
- 1.1.5 Construction of Kwu Tung Station on East Rail Line [KTU(EAL)] has commenced since February 2023.
- 1.1.6 Works Contract 1633 - Alteration and Addition Works at Kwu Tung for East Rail Line Protection Works" was awarded to Kum Shing (K.F.) Construction Company Limited to carry out the alteration and additional works to the existing railway facilities within the Project Site in order to facilitate the future construction of the Project. Wellab Limited was appointed by Kum Shing as the Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme for the Works Contract 1633 from 20 February 2023 to 31 October 2023 in view of the completion of alteration and additional works in October 2023.
- 1.1.7 Works Contract 1601 - Kwu Tung Station on East Rail Line was awarded to Dragages Hong Kong Limited in September 2023 to carry out the main civil works for the Project. Aurecon Hong Kong Limited was commissioned by Dragages Hong Kong Limited as the ET to provide EM&A services and take over the EM&A programme of the Project from 1 November 2023 to ensure that the environmental performance of the Works Contractor complies with the requirements specified in the Environmental Permit (EP no. FEP-06/129/2002/I), Environmental Review Report (ERR) and Updated EM&A Manual under this EP for the Kwu Tung Station on the East Rail Line and other relevant statutory requirements. The weekly environmental site inspections and environmental monitoring as scheduled under EM&A programme was conducted by Aurecon with effect from 1 November 2023.
- 1.1.8 This is the 11th monthly Environmental Monitoring and Audit (EM&A) Report for Contract 1601 Kwu Tung Station on East Rail Line under Environmental Permit No. FEP-06/129/2002/I. This report was prepared by Aurecon Hong Kong Ltd. (Aurecon) presenting the EM&A works carried out during the reporting period from 1 to 30 September 2024.
- 1.1.9 The scope of works under the Kwu Tung Station on the East Rail Line comprises the following:
- Excavation of the fill material above the existing tunnel box;

- Modification of existing tunnel box structures;
- Construction of concourse and platform areas;
- Construction of back-of-house areas;
- Construction of entrances, Ventilation Buildings (VB) and Fire Rescue Stairs (FRS);
- Modification of existing Emergency Access Point (EAP)/ Emergency Egress Point (EEP);
- Relocation of existing EVA and associated facilities; and
- Construction of other station associated facilities and underground adit.

1.1.10 The construction area of the Project is shown in **Figure 1**.

Project Organization

1.1.11 The project organization and contact details are shown in **Figure 3**.

Summary of Construction Works Undertaken During Reporting Month

1.1.12 The major site activities undertaken in the reporting month included:

Upper Platform and Lower Platform (North & South) (Above-ground):

- Site installation (Drainage) (Above-ground Works)
- Station excavation work (Above-ground Works)
- Foundation work for the tower crane (Above-ground Works)

Station Tunnel Box (Above-ground) and (Under-ground):

- Alteration and Additional works (Under-ground Works)
- Station excavation work (Above-ground Works)
- Advance work on tunnel box roof slab opening (Above-ground Works)

Construction Programme

1.1.13 Construction Programme from the Contractor is given in **Appendix A**.

Status of Environmental Licenses, Notifications and Permits

1.1.14 A summary of the status of the relevant permits, licenses and/or notifications on environmental protection for this project is presented in **Table 1.1**.

Table 1.1 Relevant Environmental Licenses, Permits and/or Notifications

Environmental License / Permit / Notification	Reference Number	Valid From	Valid Till	Status
Environmental Permit for whole project	FEP-06/129/2002/I	24/12/2021	N/A	Valid
Notification pursuant to Air Pollution Control (Construction Dust) Regulation	Ref No.: 497363	22/09/2023	N/A	Valid
Billing Account for Disposal of Construction Waste	Account No.: 7048687	16/10/2023	N/A	Valid
Registration of Chemical Waste Producer	5213-545-D2939-01	08/12/2023	N/A	Valid

Effluent Discharge License under Water Pollution Control Ordinance	Licence No.: WT10002429-2023	29/07/2024	31/03/2029	Valid (The licence was firstly granted on 20/03/2024, while the application for variation of licence was approved on 29/07/2024.)
Construction Noise Permit (CNP)	GW-RN0648-24	09/06/2024	08/10/2024	Valid
	GW-RN0972-24	27/08/2024	26/11/2024	Valid
	GW-RN1001-24	30/08/2024	29/12/2024	Valid
	GW-RN1082-24	16/09/2024	15/11/2024	Valid

Submission Status under the Environmental Permits

1.1.15 The status of required submission under Environmental Permit (EP) conditions under FEP-06/129/2002/I are summarized in **Table 1.2**.

Table 1.2 Summary of Status of Required Submission for FEP-06/129/2002/I

EP Conditions (FEP-06/129/2002/I)	Submission	Submission Date
1.11	Notification of Commencement Date of Construction of the Project	19 January 2022
2.8	Updated Environmental Monitoring and Audit (EM&A) Manual (Oct 2022)	28 September 2022 (1st submission) 25 October 2022 (2nd submission) 7 November 2022 (Approved)
2.9	Management Organizations	18 January 2023 (1st submission) 1 November 2023 (2nd submission)
2.10	Project Layout Plan of Kwu Tung Station	11 November 2022 15 November 2022 (Deposited)
2.11	Landscape and Visual Plan	6 February 2023 (1st submission) 15 September 2023 (2nd submission) 18 September 2023 (Deposited)
4.3	Baseline Monitoring Report (Dec 2022)	9 December 2022
4.4	Monthly EM&A Report (August 2024)	13 September 2024

1.1.16 For the requirements of measures during operation of the existing LMC Spur Line under the Permit No.EP-129/2002 or under subsequent varied Permit, please refer to the EIAO and dedicated websites to the LMC Spur Line project for information, including the minutes of meeting and the associated papers of the Environmental Committee, the finalized plans and submissions for the LMC Spur Line.

2 AIR QUALITY MONITORING

2.1 Monitoring Requirement

- 2.1.1 According to the Updated EM&A Manual of the Project, 1 - hour Total Suspended Particulates shall be conducted at least 3 times every six days. A sampling frequency shall be strictly observed at all the monitoring stations.
- 2.1.2 Since November 2023, Aurecon Hong Kong Limited (Aurecon) has taken over the role of ET from Wellab Limited to carry out the air quality impact monitoring.

2.2 Monitoring Location

- 2.2.1 According to Section 5.5.7 of the Updated EM&A Manual, five air quality monitoring locations, namely CD1a, CD2a, CD3a, CD4a, CD5 are covered under the Project as shown in **Figure 2**. The locations of the representative air sensitive receivers (ASR) around the Project as identified in the ERR are shown in **Figure 2a**. **Table 2.1** describes the location of the air quality monitoring stations.

Table 2.1 Location for Air Quality Monitoring Locations

Monitoring Station ID	Description
CD1a	Village Houses along Ma Tso Lung Road
CD2a	Village Houses near Shek Tsai Leng
CD3a	Village Houses along Ho Sheung Heung Road
CD4a	Construction site office of Advance Site Formation and Engineering Infrastructure Works at Kwu Tung North and Fanling North New Development Areas – Contract No. ND/2019/01
CD5	Multi-Welfare Services Complex

Remark: Since Kwu Tung North Multi-Welfare Services Complex has been in service, air quality monitoring location of Dills Corner Garden (CD5a) was relocated back to this Complex (CD5) to carry out monitoring since December 2023, in accordance with the Section 5.5.7 of the approved Updated EM&A Manual of the Project.

2.3 Monitoring Equipment

- 2.3.1 Upon approval of the IEC, 1-hour TSP levels can be measured by direct reading method with using handheld dust meter, which is capable of producing comparable results as that by the high-volume sampling method, to indicate short event impacts.
- 2.3.2 The proposed use of handheld dust meter was submitted to the IEC and agreement was obtained from the IEC in accordance with Section 5.4.5 of the Updated EM&A Manual.
- 2.3.3 **Table 2.2** summarizes the equipment used in the air quality monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

Equipment	Model	Serial Number
Portable Dust Meter – 1- hour TSP	SIBATA Digital Dust Indicator (Model: LD-5R)	0Z4545
		851816
		882106
		882150

		942532
		992820

2.3.4 In accordance with Section 5.6.3 and 5.6.4 of the Updated EM&A Manual, Meteorological information extracted from “Hong Kong Observatory - Ta Kwu Ling Weather Station” is used as the alternative method to obtain representative wind data. For Ta Kwu Ling Weather Station, it is located nearby the Project site and situated at approximately 15m above mean sea level. The station’s wind data monitoring equipment is set above the existing ground 10 meters in compliance with the general setting up requirements. Furthermore, this station also provides other meteorological information, such as humidity, rainfall, air pressure and temperature etc.

2.4 Monitoring Parameters, Frequency and Duration

2.4.1 The parameters, duration and frequency for air quality impact monitoring is given in **Table 2.3**. Monitoring stations CD1a, CD2a, CD3a, CD4a and CD5 were set up in accordance to the requirements for placement of equipment, as set out in Section 5.5.7 of the Updated EM&A manual of the Project.

Table 2.3 Air Quality Monitoring Parameters, Frequency and Duration

Parameters	Frequency
1 - hour TSP	3 times for every 6 days

2.5 Monitoring Methodology and QA/QC Procedure

1-hour TSP Air Quality Monitoring

Instrumentation

2.5.1 The measuring procedures of the handheld dust meter are in accordance with the Manufacturer’s Instruction Manual as follows:

2.5.2 Handheld dust meter was deployed for the air quality monitoring location as shown in **Table 2.1**.

2.5.3 The measuring procedures and equipment set-up of the 1-hour dust meters were in accordance with the Manufacturer’s Instruction Manual as follow:

- Securely fix the meter at a level of 0.9m to 1.9m from ground, at a position with unrestricted airflow around the meter.
- Pull up the air sampling inlet cover.
- Change the Mode 0 to BG with once.
- Push Start/Stop switch once.
- Turn the knob to SENSLADJ and press it.
- Push Start/Stop switch once.
- Return the knob to the position MEASURE slowly.
- Push the timer set switch to set measuring time.
- Remove the cap and make a measurement.

2.6 Maintenance/Calibration

2.6.1 The following maintenance/calibration was required for the direct dust meters:

- Check and calibrate the dust meter by high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. Calibration of dust meter should be carried out every six months throughout all stages of the air quality monitoring. The calibration certificates of the monitoring equipment are presented in **Appendix B**.

- The correlation coefficient was checked to establish the correlation relationship between the handheld dust meter and HVS. The correlation factor was determined by comparing the results of HVS and handheld dust meter.
- Checking is made prior to air quality monitoring commencing to ensure all equipment is in good working condition with necessary power supply. Zero count test were conducted before and after each monitoring event.
- The calibration of environmental equipment used was cross checked by the IEC to confirm the precision of the application.

2.7 Environmental Quality Performance Limits

2.7.1 The baseline monitoring results formed the basis for determining the air quality criteria for the impact monitoring. The ET shall compare the impact monitoring results with air quality criteria set up for 1-hour TSP. Based on the baseline dust monitoring data and the derivation criteria specified above, the summary of baseline air quality monitoring results and Action/Limit Levels are presented in **Table 2.4**.

Table 2.4 Action and Limit Levels for 1-hour TSP

Monitoring Location	Range of Baseline Monitoring Results ($\mu\text{g}/\text{m}^3$)	Action Level ($\mu\text{g}/\text{m}^3$)	Limit Level ($\mu\text{g}/\text{m}^3$)
CD1a	15 - 90	275	500
CD2a	14 - 104	279	
CD3a	17 - 122	279	
CD4a	19 - 173	281	
CD5	19 - 172	280	

2.8 Results and Observations

2.8.1 The Impact air quality monitoring result are summarized in **Table 2.5**. Detailed monitoring results and graphical presentations of air quality monitoring results are shown in **Appendix D**.

Table 2.5 Summary of 1 - hour TSP Monitoring Results

Monitoring Location	Average ($\mu\text{g}/\text{m}^3$)	Range ($\mu\text{g}/\text{m}^3$)	Action Level ($\mu\text{g}/\text{m}^3$)	Limit Level, ($\mu\text{g}/\text{m}^3$)
CD1a	17	12 - 30	275	500
CD2a	21	13 - 35	279	
CD3a	21	14 - 30	279	
CD4a	35	23 - 46	281	
CD5	44	28 - 63	280	

2.8.2 The schedule of air quality monitoring in the reporting month is shown in **Appendix C**.

2.8.3 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedances was recorded.

2.8.4 According to our field observations, the major dust sources identified at the designated air quality monitoring stations in the reporting month are shown in **Table 2.6**:

Table 2.6 Observation at Air Quality Monitoring Stations

Monitoring Station	Major Dust Sources
CD1a	No sources of dust emission was observed.
CD2a	No sources of dust emission was observed.
CD3a	No sources of dust emission was observed.
CD4a	1. Other construction site: Vehicle emission 2. Road traffic

CD5	<ol style="list-style-type: none">1. Project construction site: Excavation, crane lorry, generator, dump truck, grab-mount lorry, excavator breaker, mobile crane, cement truck, roller, loaders, crawler crane2. Other construction site: Vehicle emission
-----	--

2.8.5 The weather information during the reporting period is summarized in **Appendix F**.

2.9 Event and Action Plan

2.9.1 Should non-compliance of the air quality criteria occur, actions in accordance with the Action Plan in **Appendix G** shall be carried out.

3 NOISE MONITORING

3.1 Monitoring Requirements

- 3.1.1 In accordance with the Updated EM&A Manual, construction noise monitoring shall be conducted in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}) to monitor the construction noise arising from the construction activities.
- 3.1.2 The regular monitoring frequency for each monitoring station was on a weekly basis and one set of measurements between 0700 and 1900 hours on normal weekdays shall be conducted. **Table 3.1** shows the established Action and Limit Levels for the environmental monitoring works.

Table 3.1 Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700-1900 hrs on normal weekdays	When one documented complaint is received	75 dB(A)

3.2 Monitoring Location

- 3.2.1 According to Section 6.5.4 of the Updated EM&A Manual, one designated noise monitoring station for the Project is shown in **Figure 2**. The location of the representative noise sensitive receivers (NSR) around the Project as identified in the ERR are shown in **Figure 2a**. **Table 3.2** describes the location of the noise monitoring station.

Table 3.2 Location of Noise Monitoring Station

Monitoring Station(s)	Location(s)
CN1	Multi-Welfare Services Complex

Remark: Since Kwu Tung North Multi-Welfare Services Complex has been in service, noise monitoring location of Dills Corner Garden (CN1a) was relocated back to this Complex (CN1) to carry out monitoring since December 2023, in accordance with the Section 6.5.4 of the approved Updated EM&A Manual of the Project.

3.3 Monitoring Equipment

- 3.3.1 As referred to the requirements of the Technical Memorandum (TM) issued under the NCO, the sound level meters in compliance with the International Electro technical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications should be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The measurements may be accepted as valid only if the difference between calibration levels obtained before and after the noise measurement is less than 1.0 dB (94 dB \pm 0.1 dB).
- 3.3.2 **Table 3.3** summarizes the noise monitoring equipment used. Copies of calibration certificates are attached in **Appendix B**.

Table 3.3 Noise Monitoring Equipment

Equipment	Manufacturer	Model	Serial Number
Sound Level Meter	NTi Audio	XL2	A2A-17638-E0
Acoustical Calibrator	RION	NC-74	34615222

3.4 Monitoring Parameters, Frequency and Duration

3.4.1 The parameters and frequencies of impact noise monitoring is summarized in **Table 3.4**. Monitoring stations CN1 was set up in accordance with the requirements for placement of equipment, as set out in Section 6.5.4 of the Updated EM&A manual of the Project.

Table 3.4 Noise Quality Monitoring Parameters, Frequency and Duration

Parameters and duration	Frequency	Measurement
30-mins measurement at each monitoring station between 0700 and 1900 on normal weekdays. L_{eq} , L_{10} and L_{90} would be recorded.	Once per week	Façade

3.5 Monitoring Methodology and QA/QC Procedures

3.5.1 Noise measurement should be conducted as the following procedures:

- The sound level meter was set on a tripod at a point 1m from the exterior of the noise sensitive façade and at the position of 1.2m above the ground;
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels were adjusted with a correction of +3 dB(A);
- The battery condition was checked to ensure good functioning of the meter;
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - frequency weight: A
 - time weighting: Fast
 - measurement time: L_{eq} (30-mins) dB(A)
(As six consecutive L_{eq} (5-mins) during non-restricted hours (i.e., 0700-1900 hrs. on normal weekdays))
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re- calibration or repair of the equipment;
- During the monitoring period, the L_{eq} , L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet;
- Noise measurement was paused temporarily during periods of high intrusive noise (e.g., dog barking, helicopter noise) if possible and observation record during measurement period should be provided; and
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. The wind speed should be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

3.6 Maintenance and Calibration

3.6.1 Maintenance and calibration procedures should also be carried out, including:

- The sound level meter and calibrator should be calibrated annually by a HOKLAS laboratory.
- The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
- Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements would be accepted as valid only if the calibration levels before and after the noise measurement agreed to within 1.0 dB.

- The calibration of environmental equipment used was cross checked by the IEC to confirm the precision of the application.

3.7 Results and Observations

3.7.1 The noise monitoring results are summarized in **Table 3.5**. Detailed monitoring results and graphical presentations of noise monitoring are shown in **Appendix E**.

Table 3.5 Summary of Noise Monitoring Results

Monitoring Station	Time Period	Noise Level Leq (30-mins) dB(A)	Limit Level dB(A)
CN1	Daytime (0700 – 1900)	67.2 – 69.4	75

3.7.2 The schedule of noise monitoring in reporting month is shown in **Appendix C**.

3.7.3 Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. The summary of exceedance record in reporting month is shown in **Appendix H**.

3.7.4 According to our field observations, the major noise sources identified at the designated noise monitoring station in the reporting month are shown in **Table 3.6**:

Table 3.6 Observation at Noise Monitoring Station

Monitoring Station	Major Noise Source
CN1	<ol style="list-style-type: none"> 1. Project construction site: Excavator, crane lorry, generator, dump truck, grab-mount lorry, excavator breaker, mobile crane truck, mobile crane, cement truck, roller, loaders, crawler crane, air compressor 2. Other construction site: Generator, cement truck, tower crane, excavation, crane, crane truck and dump truck 3. Road traffic

3.7.5 The weather information for noise monitoring during reporting period is summarized in **Appendix F**.

3.8 Event and Action Plan

3.8.1 Should non-compliance of the noise monitoring criteria occur, actions in accordance with the Event and Action Plan in **Appendix G** shall be carried out.

4 LANDSCAPE AND VISUAL MONITORING

4.1 Monitoring Requirements

- 4.1.1 In accordance with Section 11.3 of the Updated EM&A Manual, site audit should be undertaken during the construction phase of the Project to check that the proposed landscape and visual mitigation measures are properly implemented and maintained as per their intended objectives.
- 4.1.2 Site inspections of the implementation of landscape and visual mitigation measures were conducted by ET at least once per month during the construction period. The observation and recommendations made during the audit sessions are summarized in **Table 5.1**. The implementation status is given in **Appendix I**.

5 ENVIRONMENTAL SITE INSPECTION

5.1 Site Audits

- 5.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures under the Contract. In the reporting period, site inspections were carried out on 04, 11, 19 and 25 September 2024. The site inspection held on 19 September 2024 was a joint inspection with the MTR's Representative, IEC, the Contractor, and the ET during the reporting period.
- 5.1.2 No non-conformance was identified during the site inspections in the reporting month. Key observations during the site inspections in the reporting period are summarized in **Table 5.1**. The observation and rectification photos are attached in **Appendix M**.

Table 5.1 Observations and Recommendations of Site Audit

Date	Environmental Observation(s) / Recommendation(s)	Follow-up Status	Close-out Date / Status
2024 - 9 - 04	No Major environmental issue was observed during the site inspection.	NA	NA
2024 - 9 - 11	No Major environmental issue was observed during the site inspection.	NA	NA
2024 - 9 - 19	No Major environmental issue was observed during the site inspection.	NA	NA
2024 - 9 - 25	No Major environmental issue was observed during the site inspection.	NA	NA

5.2 Implementation Status of Environmental Mitigation Measures

- 5.2.1 In accordance with the Updated EM&A Manual, the mitigation measures detailed in the documents are recommended to be implemented during the construction phase. An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is provided in **Appendix I**.

5.3 Solid and Liquid Waste Management Status

- 5.3.1 In accordance with the Updated EM&A Manual, waste management was audited during weekly site audit to ensure that the recommended good practices and other measures recommended in the EMIS of the Updated EM&A Manual (provided in **Appendix I**) are properly implemented by the Contractor. Waste management practice including waste handling, storage, transportation, and disposal were audited.
- 5.3.2 The Contractor is advised to minimize the wastes generated through recycling or reusing. All mitigation measures stipulated in the Updated EM&A Manual shall be properly implemented. The status of implementation of waste management and reduction measures are summarized in **Appendix I**.
- 5.3.3 Waste generated from this Project includes inert C&D materials and non-inert C&D materials. Non inert C&D materials are made up of general refuse and waste that cannot be reused or recycled and have to be disposed of at the designated landfill sites. The amount of wastes generated by the construction works of the Project during the reporting month is shown in **Appendix J**.

6 ENVIRONMENTAL NON-COMFORMANCE

6.1 Summary of Exceedances

6.1.1 No exceedance of Action or Limit Levels of air quality was recorded in the reporting period.

6.1.2 No exceedance of Action or Limit Levels of construction noise was recorded in the reporting period.

6.2 Summary of Environmental Non-Compliance

6.2.1 No environmental non-compliance was recorded in the reporting period.

6.3 Summary of Environmental Complaint

6.3.1 There was no environmental complaint received in the reporting month. The Cumulative Complaint Log since the commencement of the Project is presented in **Appendix L**.

6.4 Summary of Environmental Summons and Successful Prosecution

6.4.1 There was no successful environmental prosecution or notification of summons received since the Project commencement. The Cumulative Log for environmental summon and successful prosecution since the commencement of the Project is presented in **Appendix K**.

7 FUTURE KEY ISSUES

7.1 Construction Programme for the upcoming months

7.1.1 Major activities in the upcoming three months include:

Upper Platform and Lower Platform (Above-ground):

- Piling and erection for tower crane (Above-ground Works)
- Construction of station structure (Above-ground Works)

Station Tunnel Box (Above-ground) and (Under-ground):

- Alteration and Additional, and E&M works inside the tunnel (Under-ground Works)
- Civil works provision for PSD installation (Under-ground Works)
- Advance work for tunnel box roof slab opening (Above-ground Works and Under-ground Works)
- Construction of station structure (Above-ground Works)

7.2 Potential Environmental Impacts and Recommended Mitigation Measure in the Coming Month(s)

7.2.1 With reference to the site layout plan including the indication of coming three months construction site activities in **Appendix A**, potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality, waste management, landscape and visual. The foreseeable environmental impacts were taken into consideration of the planned mitigation measures in the coming months.

7.2.2 The major site activities, potential environmental and recommended mitigation measures for the coming three months are shown in **Table 7.1**.

7.3 Monitoring Schedule for the Next Month

7.3.1 The tentative environmental monitoring schedule for the next month is shown in **Appendix C**.

7.4 Construction Programme for the Next Month

7.4.1 A tentative construction programme is provided in **Appendix A**.

Table 7.1 Summary Table for Site Activities, Potential Environmental Impacts and Recommended Mitigation Measure in the Coming Months

Contract No.	Major Site Activities	Location	Potential Environmental Impact	Recommended Mitigation Measures
1601	I. Piling and erection for tower crane	Upper platform and Lower platform (Above-ground)	<ul style="list-style-type: none"> ➤ Construction Dust impact ➤ Noise Impact (Construction Phase) ➤ Water Quality Impact (Construction Phase) ➤ Waste Management (Construction Waste) 	<p><u>Air Quality</u></p> <ul style="list-style-type: none"> ▪ Watering on exposed earth and dry haul road. ▪ Cover the stockpiles or dusty materials when not in use. ▪ Provide shelter with top and 3-sides for cement production activities. ▪ Any excavation or earthmoving operation shall spray with water immediately before, during and immediately after the operation so as to maintain the entire surface wet. ▪ Close the mechanical cover of the vehicles used for transporting dusty materials. ▪ Wheel washing was provided for every vehicle before leaving site. ▪ The construction plants regularly maintained to avoid the emissions of black smoke. ▪ Conduct air quality monitoring regularly. <p><u>Construction Noise</u></p> <ul style="list-style-type: none"> ▪ Mobile plant should be sited as far away from NSRs as possible and practicable. ▪ Quieter plant should be chosen as far as practicable. ▪ Vehicles and plants used on-site were checked regularly to ensure that vehicles and plants were operating normally. ▪ Vehicles were turned off when not in use. ▪ Conduct noise monitoring regularly. ▪ Provide temporary noise screens if necessary. ▪ Obtain Construction Noise Permit (CNP) for works to be
	II. Construction of station structure		<ul style="list-style-type: none"> ➤ Construction Dust impact ➤ Noise Impact (Construction Phase) ➤ Water Quality Impact (Construction Phase) ➤ Waste Management (Construction Waste)

	VI. Construction of station structure		<ul style="list-style-type: none"> ➤ Construction Dust impact ➤ Noise Impact (Construction Phase) ➤ Water Quality Impact (Construction Phase) ➤ Waste Management (Construction Waste) 	<ul style="list-style-type: none"> ▪ Stockpiling area should be provided with covers and water spraying system to prevent materials from windblown or being washed away. ▪ Chemical cabinet available on site. ▪ Recycling bins, general bins and storage area should provide. ▪ Provide training to workers on the importance of appropriate waste management procedures, including waste reduction, reuse and recycling. ▪ Drip tray should be provided.

8 CONCLUSION AND RECOMMENDATIONS

8.1 Conclusions

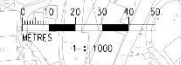

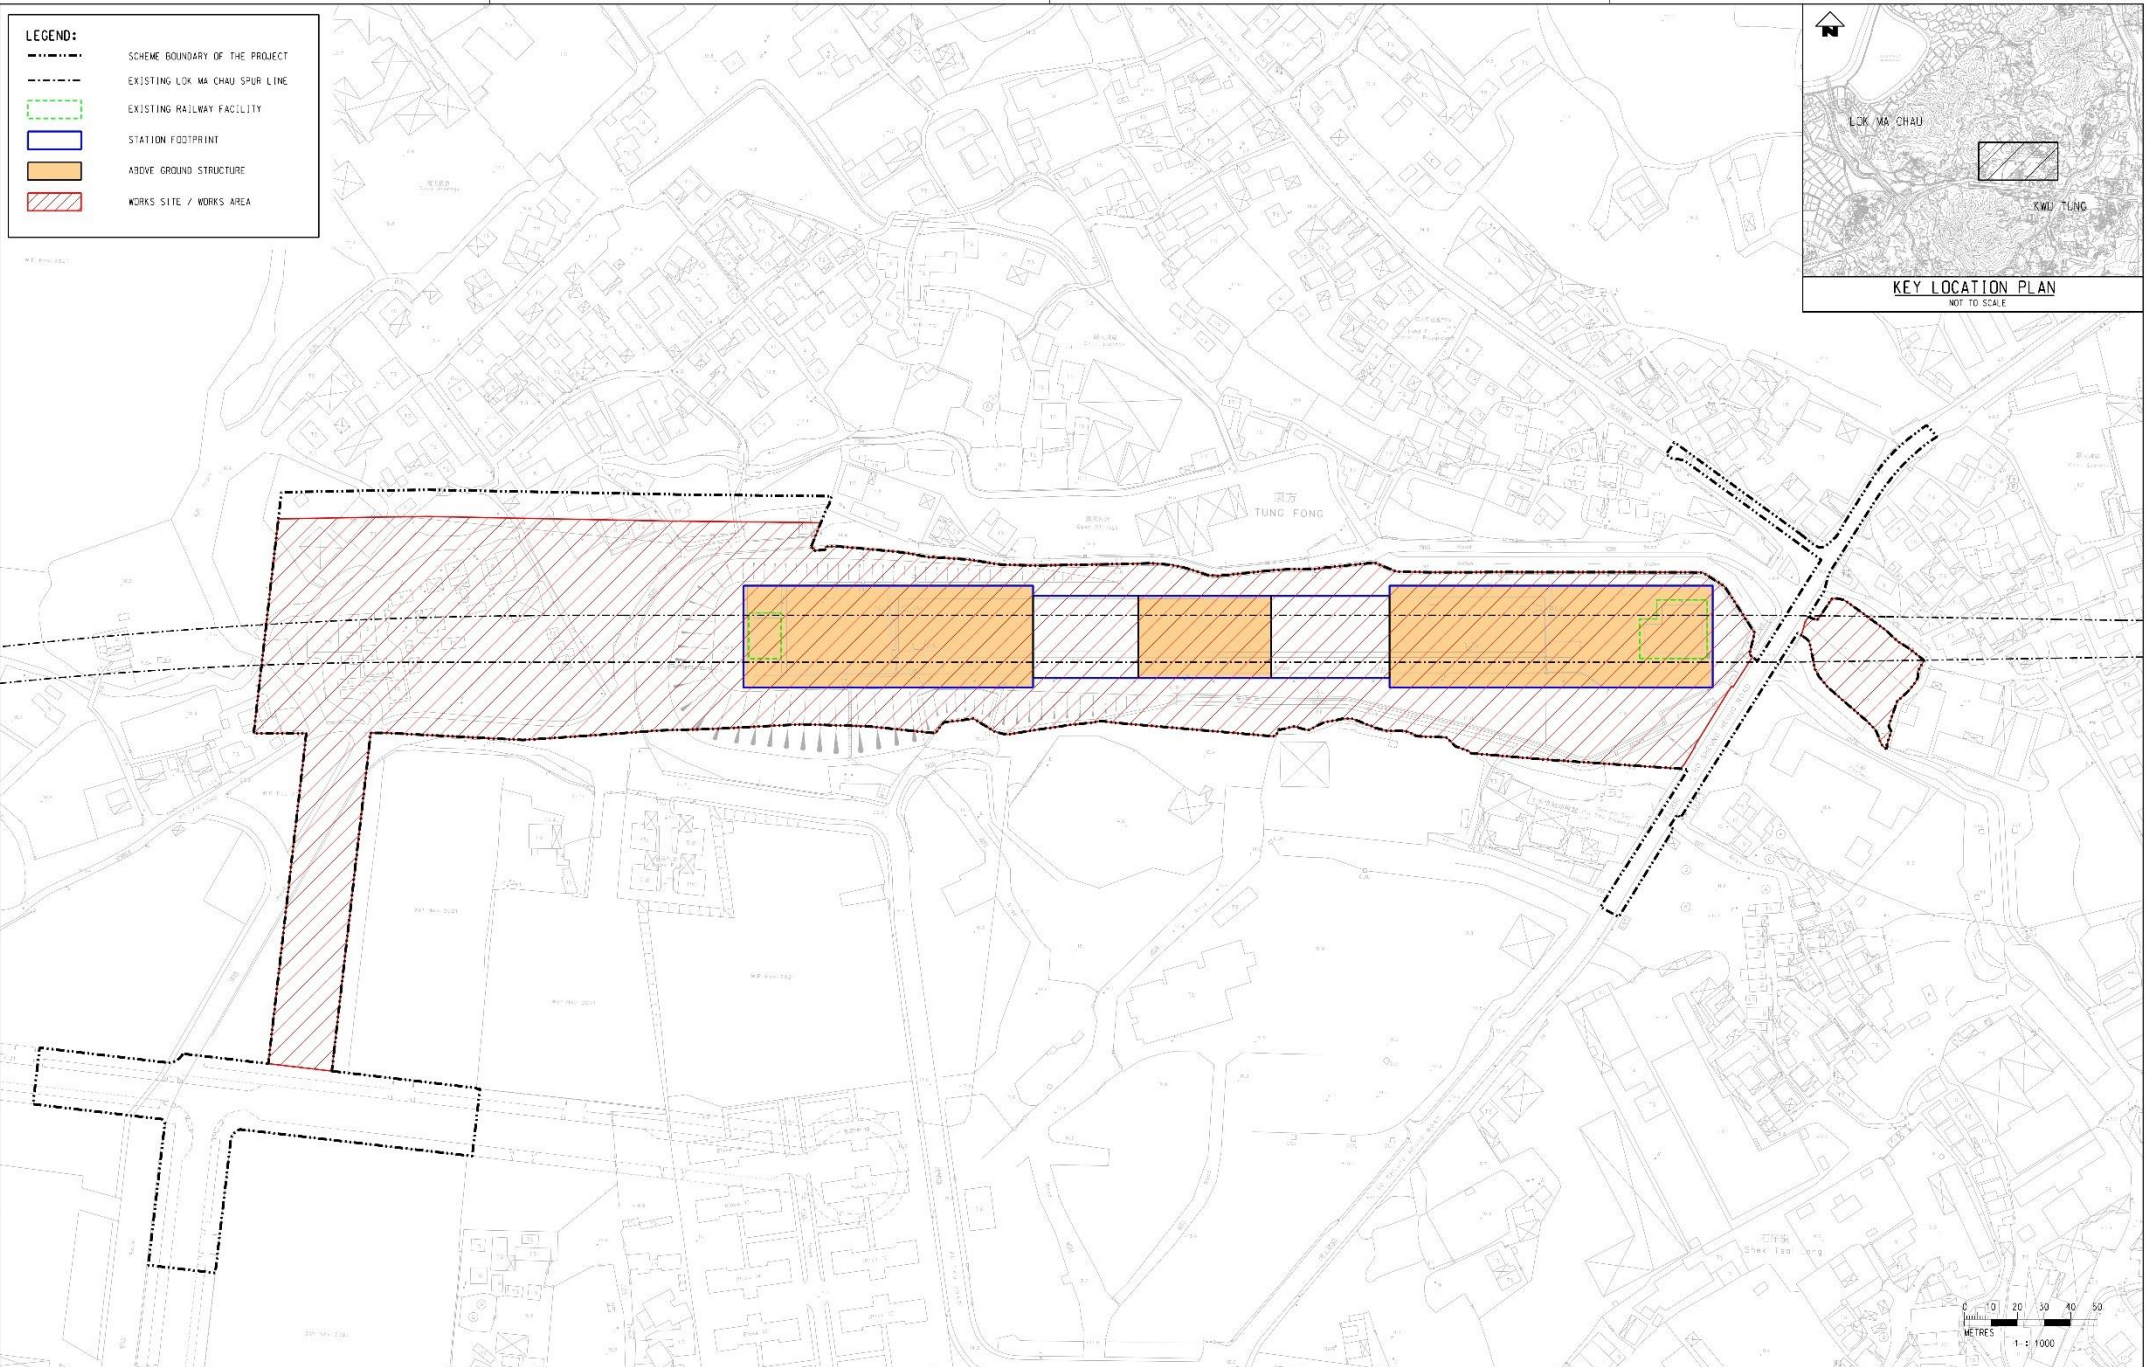

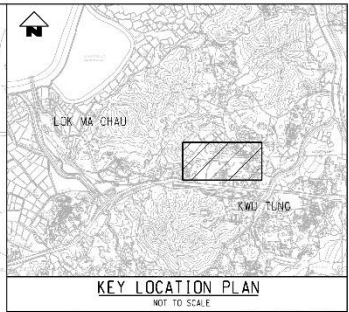

- 8.1.1 This report summarized the Monitoring Results and Audits findings of the EM&A Programme Under the EP of the Project during the reporting period from 1 September to 30 September 2024.
- 8.1.2 1-hour TSP impact monitoring was carried out in the reporting month. No Action or Limit Level exceedance at CD1a, CD2a, CD3a, CD4a and CD5 was recorded during the period.
- 8.1.3 Day time construction noise monitoring was carried out in the reporting month. No Action or Limit Level exceedance at CN1 was recorded during the period.
- 8.1.4 Environmental site inspections were carried out on 04, 11, 19 and 25 September 2024.
- 8.1.5 No environmental non-compliance was recorded in the reporting month.
- 8.1.6 No environmental complaint, notification of summons and successful prosecution was recorded in the reporting month.

8.2 Recommendations

- 8.2.1 According to the environmental audits performed in the reporting month, no major environmental deficiency was identified.

HIVOL SAMPLER CALIBRATION DATA SHEET (TSP)

Site Information

Location:	EMAX	Site ID:	EA-1	Date:	19-Mar-2024
Serial No.:	1049	Model:	TE-5170X	Operator:	Andy Li

Ambient Condition

Actual Pressure during Calibration (P _a) (mm Hg):	755.6	Actual Temperature during Calibration (T _a) (deg K):	298.3
---	-------	--	-------

Calibration Orifice

Model:	TE-5025A	Slope (m _c):	1.29570
Serial No.:	3465	Intercept (b _c):	-0.01582
Calibration Due Date:	15-Jan-25	Corr. Coeff:	0.99999

Calibration Data

Plate or Test #	ΔH ₂ O (in)	Q _a , X-Axis (m ³ /min)	I, CFM (chart)	IC, Y-Axis (corrected)
18	10.00	2.445	62.0	61.79
13	9.20	2.345	60.0	59.80
10	6.80	2.018	55.0	54.82
7	4.60	1.662	46.0	45.85
5	3.20	1.388	40.0	39.87

Sampler Calibration Relationship (Q_a on x-axis, IC on y-axis)

m = 20.7804 b = 11.4532 Corr. Coeff: 0.9963

Calculations

$$Q_a = 1/m_c \cdot [\text{Sqrt}(\Delta H_2O \cdot (P_a/P_{std}) \cdot (T_{std}/T_a)) - b_c]$$

$$IC = I \cdot (\text{Sqrt}(P_a/P_{std}) \cdot (T_{std}/T_a))$$

Q_a = actual flow rate
 IC = corrected chart response
 I = actual chart response
 m_c = calibrator slope
 b_c = calibrator intercept

m = sampler slope
 b = sampler intercept
 T_{std} = 298 deg K
 P_{std} = 760 mm Hg
 T_a = actual temperature during calibration (deg K)
 P_a = actual pressure during calibration (mm Hg)

Date of issue: 27 March 2024

Certificate No.: APJ23-155-CC001

Page 1 of 4

1. Calibration Precaution:

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

2. Calibration Conditions:

Air Temperature: 22.5 °C
 Air Pressure: 1005 hPa
 Relative Humidity: 69.8 %

3. Calibration Equipment:

5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

94 dB	31.5 Hz	± 0.10
	63 Hz	± 0.05
	125 Hz	± 0.05
	250 Hz	± 0.05
	500 Hz	± 0.05
	1000 Hz	± 0.05
	2000 Hz	± 0.05
	4000 Hz	± 0.05
	8000 Hz	± 0.10
104 dB	1000 Hz	± 0.05
114 dB	1000 Hz	± 0.05

The uncertainties are evaluated for a 95% confidence level.

Note:

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)*L shall not be liable for any loss or damage resulting from the use of the equipment.

Certificate No.: APJ23-155-CC001

Appendix I Environmental Mitigation Implementation Schedule (EMIS)

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
<i>Construction Dust Impact</i>								
S7.5.3	D1	<p>The following dust suppression measures/practices should be incorporated:</p> <ul style="list-style-type: none"> • undertaking at all times to prevent dust nuisance as a result of the activities. Effective dust suppression measures, as necessary, should be installed to minimise air quality impacts, at the boundary of the site and at any sensitive receivers. • Frequently cleaning and watering the site to minimise fugitive dust emissions. • Effective water sprays shall be used during the delivery and handling of all raw sand, aggregate and other similar materials, when dust is likely to be created, to dampen all stored materials during dry and windy weather. • Watering of exposed surfaces shall be conducted as often as possible depending on the circumstances. • Areas within the site where there is a regular movement of vehicles shall have an approved hard surface, be kept clear of loose surface materials and / or regularly watered. • Where dusty materials are being discharged to vehicle from a conveying system at fixed transfer point, a three-sided roofed enclosure with a flexible curtain across the entry shall be provided. Exhaust fans shall be provided for this enclosure and vented to a suitable fabric filter system. • Confine haulage and delivery vehicles to designated roadways inside the site. If in the opinion of the Engineer, any motorised vehicle is causing dust nuisance, the Engineer may require that the vehicle be restricted to a maximum speed of 15 km per hour while within the site area. 	Minimise dust impact at the nearby sensitive receivers	Contractor	All construction sites	Construction phase	<ul style="list-style-type: none"> • APCO • To control the dust impact to meet HKAQO and EIAOTM 	<p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>N/A</p> <p>Implemented</p>

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
		<ul style="list-style-type: none"> • Wheel cleaning facilities shall be installed and used by all vehicles leaving the site. No earth, mud, debris, dust and the like shall be deposited on public roads. Water in the wheel cleaning facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit details of proposals for the wheel cleaning facilities to the Engineer prior to construction of the facility. Such wheel cleaning facilities shall be usable prior to any earthwork excavation activity on site. The Contractor shall provide a hard-surfaced road between any cleaning facility and the public road. • Any stockpile of dusty material shall be either: a) covered entirely by impervious sheeting; b) placed in an area sheltered on the top and the three sides; or c) sprayed with water so as to maintain the entire surface wet. • Chemical wetting agents shall only be used on completed cuts and fills to reduce wind erosion. • All site vehicular exhausts should be directed vertically upwards or directed away from ground to minimise dust nuisance as far as practicable. • Ventilation system, equipped with proprietary filters, should be provided to ensure the safe working environment inside the tunnel. Particular attention should be paid to the location and direction of the ventilation exhausts. The exhausts should not be allowed to face any sensitive receivers directly. Consideration should also be given to the location of windows, doors and direction of prevailing winds in relation to the nearby sensitive receivers. 						<p>Implemented</p> <p>Implemented</p> <p>N/A</p> <p>Implemented</p> <p>N/A (To be implemented when necessary)</p>

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
		<p>The following measures related to stockpiling, loading and unloading activities should be incorporated:</p> <ul style="list-style-type: none"> • The working area of any excavation or earthmoving operation shall spray with water immediately before, during and immediately after the operation so as to maintain the entire surface wet; • Exposed earth shall be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies; • Any stockpile of dusty materials shall be either covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides; and sprayed with water so as to maintain the entire surface wet; and • Other suitable dust control measures as stipulated in the Air Pollution Control (Construction Dust) Regulation, where appropriate, should be adopted. 						<p>Implemented</p> <p>N/A (To be implemented when necessary)</p> <p>Implemented</p> <p>Implemented</p>

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
S7.5.3	D2	<p>The following good site practices to reduce the exhaust emission from the use of non-road mobile machinery and construction plant and equipment should be implemented:</p> <ul style="list-style-type: none"> Regulated machines shall be used and exempted NRMMS should be avoided where practicable. Use cleaner fuel such as Ultra Low Sulphur Diesel (ULSD) in diesel-operated construction plant to reduce sulphur dioxide emission. Use of electric PMEs where practicable. Use power supplied from power utilities when practicable (e.g. to replace generators). Switch off the engine of PMEs when idling. Implement regular and proper maintenance for plant and equipment. Employ plant and equipment of adequate size and power output and avoid overloading of the plant. Locate the PMEs away from sensitive receivers as far as possible. Erect screen to shield the emission source from sensitive receivers where necessary and practicable. 	Control emissions from non-road mobile machinery	Contractor	All construction sites	Construction phase	<ul style="list-style-type: none"> Air Pollution Control (NRMMS) (Emission) Regulation To control the fuel combustion emission from PMEs 	<p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>N/A (To be implemented when necessary)</p>
S14.3.3.4	D3	Implement regular dust monitoring under EM&A programme during the construction phase.	Monitoring impact of dust	Contractor	Selected dust monitoring stations	Construction phase	• EIAO-TM	Implemented
Construction Noise								
S8.4.4.1	N1	The following good site practices to reduce the noise impact from construction site activities, the following measures should be implemented:	Control construction airborne noise	Contractor	All construction sites	Construction phase	• Annex 5, EIAO-TM	

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
		<ul style="list-style-type: none"> only well-maintained plant should be operated onsite and plant should be serviced regularly during the construction programme; machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs; silencers or mufflers which available on construction equipment should be properly fitted and maintained during the construction works; spoil transportation routes should be directed away from NSRs as far as practicable; mobile plant should be sited as far away from NSRs as possible and practicable; material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities; noise monitoring at selected NSRs should be conducted as far as practicable; and provide designated unloading areas away from the NSR as far as possible. 						<p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p> <p>Implemented</p>
S8.4.4.2	N2	Use of quiet plant, where necessary should be made reference to the Powered Mechanical Equipment (PME) listed in the Technical Memorandum or the Quality Powered Mechanical Equipment (QPME) / other commonly used PME listed in Environmental Protection Department (EPD) web pages as far as possible which includes the Sound Power Level (SWLs) for specific quiet PME	Reduce the noise levels from plant items	Contractor	All construction sites where practicable	Construction phase	<ul style="list-style-type: none"> Annex 5, EIAO-TM PN 1/24 	Implemented
