13 November 2009

Dear Sir,

ETWB Technical Circular No. 31/2004
 Trip-ticket System for Disposal of Construction and Demolition Material
Shatin to Central Link (SCL)

I refer to your letter dated 10 November 2009 regarding the subject.

I am pleased to advise that the North East New Territories (NENT) Landfill is hereby designated to receive construction waste (excluding contaminated materials) generated from the above contract under the trip-ticket system.

As a general policy to conserve landfill resources, mixed construction waste should be sorted at source. Construction waste consisting entirely of inert construction waste (or commonly termed as public fill) including rock, rubble, boulder, earth, soil, sand, concrete, asphalt, brick, tile, masonry or used bentonite should be delivered to public fill reception facilities. For a truck load of construction waste to be accepted at the landfill, the weight of the waste divided by the permitted gross vehicle weight of the vehicle should not be greater than 0.25 for goods vehicle with demountable skip and 0.2 for other types of vehicle.

The construction waste delivered for landfill disposal shall further contain no free water and the liquid content shall not exceed 70% by weight.

For better control and enforcement of the trip ticket system, please provide us with one week's advance notice (with the contractor's name and contact details, including the contract number) before starting to deliver the waste to the landfill. Please also keep us informed of any subsequent changes to your tender and disposal programme.

As the Construction Waste Disposal Charging Scheme has come into operation, waste hauler should also present valid "Chit" (in addition to the current Disposal Delivery Form under the trip-ticket system) when disposing of construction waste at the waste disposal facilities.
