## Notes:

[1] The assessment will only include NSRs which rely on opened windows for ventilation.

[2] Only the first layer of NSRs has been selected for assessment.

[3] R – Residential Premises

[4] NAP – Noise Assessment Point.

[5] According to IND – TM, “directly affected” means that the NSR is at such a location that noise generated by the IF is readily noticeable at the NSR and is a dominant feature of the noise climate of the NSR; “indirectly affected” means that the NSR is at such a location that noise generated by the IF, whilst noticeable at the NSR, is not a dominant feature of the noise climate of the NSR; “not affected” means that the NSR is at such a location that noise generated by the IF is not noticeable at the NSR.

[6] The corresponding Area Sensitivity Ratings of the NSRs are determined based on the best available information and is for indicative assessment only. Area Sensitive Ratings of the representative NSRs are defined subject the building layout, phasing development and IFs. The Area Sensitivity Rating would be reviewed as necessary based on the contemporary conditions/situations such as adjoining land uses, IFs or the latest development layout.

[7] Rural Area – Rural Area, including country parks or village type developments
